THE ATARI WORKFORCE

PAPERCLIP

"The #1 Best Selling Word Processing Package"

- BILLBOARD'S computer software chart
- "... by far the best word processor ever available for the Atari" ANTIC
- Editing features include Block Move, Copy and Delete, Global Search and Replace
- Enter repetitive words, sentences, or paragraphs instantly with Macro Command
- Edit two files simultaneously and transfer text between documents using Dual Text Windows
- Automatic Page Numbering, Table of Contents, Headers and Footers
- Editing screen extends up to 130 columns wide and scrolls in any direction
- Print Preview displays formatted text exactly as it will be printed
- Automatically saves files as you write NEW! SPELL PACK FOR THE 130XE WITH A 36,000 WORD DICTIONARY WITH ON SCREEN WORD SEARCH.

B/GRAPH

"Graph-generating and statistical analysis ... we recommend B/Graph! – INFOWORLD

- graph up to three factors with 100 data points each
- choose pie charts, line and area graphs, 2 and 3 dimensional bar charts and more
- convert instantly between graph types without re-entering data
- full screen editor, multiple grid and graph scaling, automatic labelling, overlays, "slide show" capability
- statistical analysis functions include standard deviation, variance, Chi-square, regressions, plotting and many more
- reads and writes to VisiCalc DIF use VisiCalc files with B/Graph and vice-versa
- compatibile with most popular printers, printer cards, interfaces

HOMEPAK

- "... inexpensive, powerful, integrated software. As such, HomePak is the winner of InfoWorld's Best Buy Award."
- INFOWORLD MAGAZINE
- "...quite simply, the best ... the highest rating possible." ANALOG COMPUTING

Three easy-to-use programs on one disk:

1. HOMETERM TELECOMMUNICATIONS

- Puts you in touch with bulletin boards, public databases and on-line services
- Powerful user-defined Macro facility log on to your favorite service or bulletin board with just one command
- Store up to 10 macros per document
- X-Modem protocol, the virtual on-line standard
- Download files of any virtually any length
- Flexible data handling save incoming text to disk, edit it, print it

2. HOMETEXT WORD-PROCESSOR

- Over 20 full-screen editing and formatting features: move & copy, word-wrap, justification, automatic paging and many more
- What You See Is What You Get (WYSIWYG) – screen is an exact representation of the printed page
- Supports most major printer functions including boldface, underlining and extended characters

3. HOMEFIND DATABASE MANAGER

- Natural English-language data entry/retrieval system for simplified electronic filing
- Includes the key search/sort functions, flexible queries, easy output commands and sophisticated Report Composer

All three HomePak programs reside in memory together – it's easy to transfer data between them and perform integrated tasks.

BATTERIES INCLUDED, an ITM company, 30 Mural Street, Richmond Hill, Ontario, Canada, L4B 1B5 (416)881-9841, Customer Information (416)881-9816. CASE OF THE MISSING RAM

Why do I get only about 20K of available memory with my Atari Microsoft BASIC II cartridge whether I have 32K or 48K of RAM installed in my 800?

David Ferguson Pontotoc, MS

The reason for this is that the 16K cartridge "overrides" any RAM that would otherwise use the same address space. If the RAM is not there to begin with, it isn't missed. Standard Atari BASIC gives only 8K of address space, so a 48K machine will give you only 8K more available memory than a 32K machine. If you own an XL or XE and press the [OPTION] key while booting up, you are telling the computer to use its RAM instead of the "built-tin" BASIC.—ANTIC ED.

WRONG POKES

In September's Tech Tips, the POKEs necessary for controlling the cassette motor were given in reverse order. POKE 54018,52 to turn it on and POKE 54018,60 to turn it off.

Richard Brewer Princeton Junction, New Jersey

WEFAX LED

When building the WEFAX Interface Board (Antic, September 1986) I recommend using a very low power consumption LED. Otherwise you may not "see the light." It is always good practice to use the lowest power consumption components available in any project.

Michael Angier Seabrook, Texas

THANKS, CHARLIE

Many thanks to **Antic** Technical Editor Charlie Jackson for donating his survey compiler program, without which I probably would still be laboring over the figures from our club survey.

Paul Wheeler MACE Membership Chairman Detroit, MI

ODD CHARACTERS

When I list my progam on paper, Atari's special characters come out wrong. Can you suggest a software package that can print any Atari character in my program list?

Brian LaChance Wolcott, CT

Try Lister Plus (\$19.95, Antic Catalog, AP0170). This program by Chet Walters, author of Antic's Card Shuffler (July, 1986) and SSSnake! (October, 1986) dumps any listed file to the printer usng any character set you choose.— ANTIC ED

COLOR AUTOBOOT

How can I run 1st Word from inside an AUTO folder? This is the only program I have been unable to autorun on my ST by putting it into the AUTO folder with a .PRG extender. Also, is it possible to autoboot programs (e.g. dBMAN) in medium resolution on a color monitor? I have tried this without success.

Raymond Norris Waterloo, Ontario, Canada

The AUTO folder, if found, is executed right after the ST has booted and before GEM is initialized. A program making a single call to any GEM-related function will hang up the system. Ist Word is certainly GEM-based.

As for booting in medium-res, set up your color desktop as desired and then click on "Save Desktop." The disk will be active for a short time, and when you use it to boot with, your desktop will reappear.—ANTIC ED

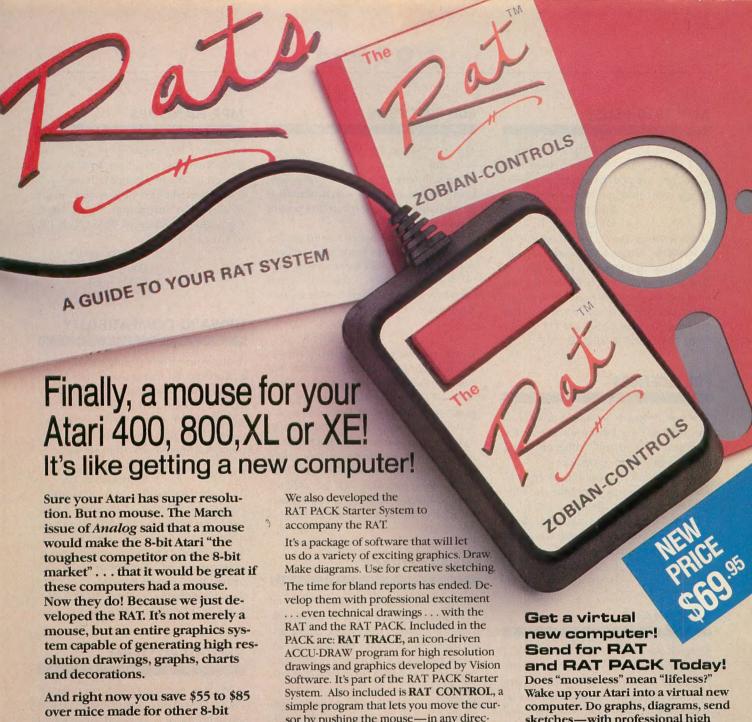

PAYROLL BLUES

I am a small business entrepreneur with a complete Atari setup that I use daily. Many business programs are just great, but I'm having trouble finding a good payroll program for the 8-bit computers. Do you know of one?

> Carl Manson Seaside, CA

See the Miles Payroll System from Miles Computing in this issue's Shoppers Guide. A review of this product is scheduled to appear in a forthcoming issue.

—ANTIC ED

computers.

Already such software as Super 3-D Plotter®, Master Disk DirectoryII®, Writer80®, Rambrandt® and AtariArtist® have RAT-compatible versions.

Other software companies are scrambling to make their products RAT-compatible. They love the RAT. They should, the thousands of Atari 400, 800, XL and XE owners represent a huge new customer base for their mouse-only programs. Look for the RAT-compatible seal on the package.

sor by pushing the mouse—in any direction, at any time, quickly.

You also receive instructions on how to use the RAT in your own programs, without the use of any machine language or complicated routines.

sketches—with professional high resolution and excitement.

ANY 1020 PENS?

After I bought my Atari 1020 color plotter, I used it often. Now I can't use it at all because the pens have run out of ink. Where can I find another set of pens?

Russ Novotny Orland Park, IL

At this writing, Atari Corp. is out of 1020 plotter pens, but plans to restock. Meantime, they suggest trying local dealers. If that doesn't work, maybe by the time you read this, the pens will be again be available from Atari Customer Service, 1196 Borregas Avenue, Sunnyvale, CA 94086. (408) 745-2000.—ANTIC ED

PRL LICENSES

This was Prospero Software's answer to my query about a distribution license for compiled Pro Fortran-77 programs using the company's PRL program:

"The position with run-time licenses is that it free—you may distribute the PRL with your software when you sell it."

This is the icing on the cake. There isn't a better deal around. Prospero has done the ST world a great service.

Jay Thaddeus Houston, TX

FAIR SHAKE

Steve Roquemore's review of Micromod 2.4 (Antic, July 1986) was fair and greatly beneficial. I thank the Editorial Department for adding the updated information at the end of the review. This has saved much confusion on the part of those we've talked to.

Steve Bolduc MicroMiser Software, Orlando, FL

Antic welcomes your feedback, but we regret that the large volume of mail makes it impossible for the Editors to reply to everyone. Although we do respond to as much reader correspondence as time permits, our highest priority must be to publish I/O answers to questions that are meaningful to a substantial number of readers.

Send letters to: Antic I/O Board, 524 Second Street, San Francisco, CA 94107.

800 SPACEBAR

The spacebar on my Atari 800 has gone bad, and apparently only another keyboard will remedy it. The repair people can't find one, however, which means that all the hardware and software I've bought is useless.

I'm a teacher who uses a word processor during the school year, but I've been without the computer for several months because of this "parts" problem. Please tell me where I can find a keyboard or another 800, either new or to use for parts.

Laurie Pate Monticello, GA

We can see that you have a strong attachment to your immobilized Atari 800, but consider that the current 65XE model can be bought for under \$100—probably not much more than your keyboard repair would cost. Virtually all your existing software should run on the 65XE with no problems, and any isolated compatibility problems can be solved with the public domain program FIX XL (\$10.95, Antic Catalog, PD0026.) If any readers bave other ideas, please let us know.—ANTIC ED

MINER SETBACK

Atari game fans, Help! When playing Zone 10 of Miner 2049er by Big Five Software, I can't complete Quadrant 5. There are two areas in the lower corners that my miner can't reach. Is there a mathematical flaw in the screen layout making it impossible for the miner to jump or fall to these areas? I've killed more miners than any cave-in trying to find out. I would ask Big Five Software, but they don't seem to have a phone number anymore.

Curt Sayler Bismarck, ND

MPP HANGUPS

Neither the MPP (Supra) 1000-C and 1000-E modems hang up the phone if they answered it. The modem only hangs up if it originated the call. MPP owners can get modification instructions from Supra Corp, 1133, Commercial Way, Albany, OR 97321.

Keith Ledbetter CompuServe ID 76703,4061

UPWARD COMPATIBILITY

As my wife enters law school, I'd like to add an second inexpensive Atari to the household as a word processor. Will my older 800 software run on an 800XL as is? Will newer 8-bit software run on my older 8-bit? I sure don't want to build another software library from scratch.

Gerry Leone Minneapolis, MN

Most Atari 8-bit software is "upwardly" compatible. That is, a program which runs on a 800 with 16K will also run on a 800XL with 64K or a 130XE with 128K. Incompatibility problems are rare today and can almost always be taken care of by the Atari Translator disk or FIX-XL, a public domain program (Antic Catalog, \$10, PD0026.)—ANTIC ED

XM301 PRO*TERM

Is Mathew Arrington's modem program PRO*TERM (Antic, August 1985) compatible with the new Atari XM301 modem?

Gary D. Reed Santa Ana, CA 92704

Yes, and it works without modification.

Just plug it in.—ANTIC ED

Help!

SSSNAKE!!!

Sssnake!!! (October, 1986) tends to crash after about 10 minutes under certain conditions of play. If you're one of the people

who has gotten the message "Error 13 at 571," you can fix the listing by substituting the following two lines.

IF YOU CAN FIND A BETTER ATARI ST PROGRAM WE'LL BUY IT FOR YOU!

Full GEM interfacing, convenient Quick Keys, and many other unique features of our own.

A full-featured, professional word processing system for home and business use. You get:

- A Continuous Spell Checker that identifies misspelled words as you are typing your document.
- An additional 85,000 word, built-in Spell Checker that checks your entire document – at your command!
- On-Screen underlining, italics and boldface – as you write.
- An Outline Processor that quickly organizes notes, facts, and ideas in convenient outline format.
- Every other feature you'll need for everyday word processing, plus most of the features found in more expensive programs.

With Timeworks you get more than software...

You Get Our Customer Technical Support Team – free to all registered users.

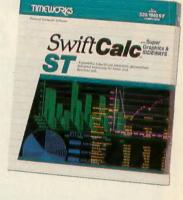

DATA MANAGER ST Writer

A complete general information Storage and Retrieval System with report writing, business graphics, and label making capabilities. Plus, you get:

- Flexibility that allows you to modify your data base structure by changing the size or position of fields of information – at any time.
- A complete Report Writer that generates customized data reports. You specify the title, location, and sequence of each column.
- An extensive Business Graphics
 Package with pie charts, bar charts, line plots, point plots, hi-lo-close stock price plots, and more.
- A Label Maker that prints your important information onto all types of labels.

With Timeworks you get our Money Back Guarantee*

If you can find anything that works better for you – and it's available – we'll buy it for you. Details inside every Timeworks package.**

SWIFTCALC ST with Sideways

A state-of-the-art spreadsheet for home and business use. You get:

- 8192 rows and 256 columns provide up to 2,048,000 cells (locations) in which to place information.
- Super Graphics graphically display and print out business information using pie charts, bar charts, line plots, point plots, hi-lo-close stock price plots, and more.
- Windows allow you to work on two sections of your spreadsheet simultaneously.
- Sideways lets you print all columns on one continuous sheet . . . sideways.
- Help Screens, help you use the program – without referring to your manual.
- Formatting Choice of five formats:
 Decimal (up to 9 places); Graphics;
 Exponential Notation; \$ Sign & Commas.

You Get Our Liberal Upgrade and Exchange Policy – Details are inside every Timeworks package.

CHROLE 069 ON READER SERVICE CARD

HE FIFTH ANNUAL ANTIC SHOPPERS GUIDE is this magazine's selection of 100 best products software, hardware and peripherals—available for 8-bit Atari computers during the 1986 Holiday Season.

Because this has truly been a year of renaissance for the entire Atari community, we Atar-

ians currently have many outstanding products on the market to choose from. In order to provide sufficient coverage of all these 1986 products, this year's Antic Shoppers Guide will report only on products for the 8-bit Atari Computers. A full-scale ST Shoppers Guide is currently featured in the Winter issue of Antic's sister publi-

cation, STart: The ST Quarterly. In certain major categories such as printers, modems and video monitors, so many makes and

models are Atari-compatible that we cannot possibly test every product on the market. For these categories, Antic picks the best products with which we have

had first-hand experience.

BY GREGG PEARLMAN, ANTIC JUNIOR EDITOR

ARDWARE

DISK DRIVES

8-BIT COMPUTERS

ATARI 130XE

The Atari 130XE is a 128K-memory computer that's capable of running "serious" productivity software without any

compromise—word processors with builtin spelling checkers, large spreadsheets and databases, etc. Yet it also has Atari's traditionally excellent graphics and ease of programming. The 130XE runs all the software written for any previous 8-bit Atari model, and the keyboard action is nothing short of outstanding. Overall, the 130XE is the best value in 128K personal computers today.

\$149.95

CIRCLE 150 ON READER SERVICE CARD

ATARI 65XE

The 65XE is essentially the Atari 800XL repackaged in sturdy gray plastic to match the rest of the new Atari computer line. It is a worthy successor to 800 and 800XL, continuing in the tradition of the best 64K personal computers ever brought to market. Available for considerably less than the low list price at mass merchandisers, the 65XE is a fine choice for first-time computer buyers with its solid base of good software and self-teaching books.

\$99.95

16-BIT COMPUTERS

ATARI 1040ST

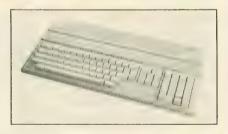

The 1040ST has a full megabyte of memory along with all the sterling features of the 520ST. It is also a bit more self-contained than its little brother, with a built-in double-sided disk drive that stores 720K and a built-in power supply to help cut down on the number of outside cables. The 1040ST is sold primarily at specialty computer stores, unlike the more mass-merchandised 520ST.

\$999.95 with monochrome monitor \$1,199.95 with color monitor

CIRCLE 150 ON READER SERVICE CARD

ATAR9 520ST

In only 18 months, the Atari 520ST has established itself as a major winner, with an impressive and fast-growing software base. This state-of-the-art personal computer boasts a fast, powerful Motorola 68000 microchip with 512K memory. (Independent upgrades to 1Mb are widely available for about \$150.) The ST comes fully equipped with a 360K, 3 1/2-inch disk drive, a two-button mouse and the easy-handling GEM operating software with its icons and drop-down menu win-

dows. You also get a choice between a 512-color RGB monitor and a 640×400 high-resolution monochrome monitor.

The ST's built-in connector ports include parallel and serial interfaces, MIDI for professional music-making and three types of video output. The keyboard includes a 10-key pad, one-touch cursor section and 10 programmable function keys.

\$799.95 with monochrome monitor \$999.95 with color monitor

See the December-January issue of STart: The ST Quarterly for an in-depth ST Shoppers Guide with a full listing of software and peripherals.

ATARI 1050

The straightforward, reliable 1050 disk drive is the proven workhorse of Atari data storage. Just pop in your floppy disk and click down the latch. The busy light starts flashing and your software goes to work. The 1050 holds 86K of disk data in standard density. Using the enhanced density option of Atari DOS 2.5, the 1050's disk storage capacity goes up to 122K. Planned for debut at the November, 1986 COMDEX trade show is a new 3 1/2-inch disk drive for 8-bit Atari computers, with a new DOS and dramatically greater storage capacity.

\$199.95. Atari Corp., 1196 Borregas Avenue, Sunnyvale, CA 94086. (408) 745-2000.

CIRCLE 150 ON READER SERVICE CARD

ASTRA ONE

Astra's The One (\$299) is a double-sided, double-density drive with direct-drive motors. The **Astra 1001** (\$250) disk drive is single-sided, double density, and the **2001** (\$395) is a single-sided twin disk drive. The **Big D** (\$495) is the double-sided version of the 2001. All prices are approximate.

Astra Systems, 2500 South Fairview, Unit L, Santa Ana, CA 92704. (704) 549-2141.

CIRCLE 151 ON READER SERVICE CARD

SUPRADRIVE HARD DISK

With 10 million bytes of data available virtually instantly at the touch of a key, the SupraDrive will dramatically change the way you use your computer. The first hard disk made for Atari 8-bit computers has proven itself a dependable performer and operates many Atari bulletin boards today. The SupraDrive stores the equivalent of more than 100 floppy disks. Our Antic Supradrive contains every 8-bit program ever published in the magazine—and we have seven megabytes left.

\$799. Supra Corp., 1133 Commercial Way, Albany, OR 97321. (503) 967-9075

CIRCLE 163 ON READER SERVICE CARD

ARDWARE

PRINTERS

ATARI XMM801

The XMM801 dot-matrix printer prints bi-directionally, has graphics capabilities and is easy to operate. Our Atari Planetarium printouts on the XMM801 were every bit as good as those on the Star Micronics SG-10. The printer is easy to set up and has a well-indexed 73-page manual. (See review elsewhere in this issue.)

\$219.95 Atari Corp., 1196 Borregas Avenue, Sunnyvale, CA 94086. (408) 745-2000.

CIRCLE 150 ON READER SERVICE CARD

STAR NL-10

The NL-10 is Star Micronics' latest in the ultra-popular line of full-featured printers that included the discontinued Gemini 10X and Star SG-10, as well as the current NX-10 (\$349) which is compatible with the Epson FX-80. An outstanding new near-letter-quality font and an expanded set of control buttons on the top panel are among the additions to the fast, sturdy, easy-operating NL-10 that provides every standard feature at a most affordable price. The NL-10 requires Star's \$60 interface cartridges, which are also available for the IBM PC and Apple.

\$319 plus \$60 parallel interface. Star Micronics, Inc., 200 Park Avenue, New York, NY 10166. (212) 986-6770.

CIRCLE 155 ON READER SERVICE CARD

MONITORS

COMMODORE 1802

It's unexpected for Antic to publicize a monitor by Atari's arch-rival. But the Commodore 1702, predecessor of the new 1802, was the most widely-used color monitor reported in our recent ANTIC ONLINE survey. Commodore monitors are an outstanding price value and boast excellent color with separate chrominance and luminance input. Someday Jack Tramiel will probably get around to bringing out a fine Atari color monitor for 8-bit computers the way he did at Commodore. Until then, check out the 1802.

\$249. Commodore Computer, 1200 Wilson Drive, West Chester, PA 19380. (215) 436-4200.

CIRCLE 157 ON READER SERVICE CARD

AMDEK 300A

This amber monochrome monitor is ideal for word processing and database or spreadsheet entry because it's so easy on the eyes. Amdeks were the most popular monchrome monitors with Atari owners responding to our ANTIC ONLINE survey.

\$199. Amdek, 2201 Lively Blvd., Elk Grove Village, IL 60007. (312) 364-1180.

CIRCLE 158 ON READER SERVICE CARD

COLOR PRINTER

OKIMATE 10

Color printing is what you get from the small, quiet and inexpensive Okimate 10 thermal printer. The Oki prints 8"x5 1/4" color images on single-sheet or tractor-feed paper. Its color printouts can be bright and crisp, if you use coated ink-jet paper plus the RAMbrandt graphics software described in the Shoppers Guide software section.

\$238 including Atari interface. Okidata Corp., 532 Fellowship Road, Mt. Laurel, NJ 08054. (609) 235-2600, (800) OKIDATA.

CIRCLE 156 ON READER SERVICE CARD

ENHANCEMENTS

ATARI XEP80

The long-awaited plug-in 80-column card is here at last. It boasts a razor-sharp text display, plugs into either joystick port and carries its own built-in Centronics parallel printer interface. It works with both monochrome and color monitors to produce bit-mapped graphics, international and graphics characters, inverse video or blinking text, underlining, double-high or double-wide text. Just keep in mind that it may be a little while before your favor-

ite software is made compatible with this smart little 80-column box.

\$79.95. Atari Corp., 1196 Borregas Avenue, Sunnyvale, CA 94086. (408) 745-2000.

CIRCLE 150 ON READER SERVICE CARD

ICD MULTI I/O BOARD

This important new I/O peripheral adds five functional devices to your 800XL (or 130XE with \$19.95 adaptor) via the parallel bus. A 256K or 1Mb RAMdisk can partition its memory into multiple disks and

be used as a print spooler. A parallel printer interface can be used with standard cables. An RS-232 port will work with serial modems or printers and includes a builtin 850 handler. A hard disk interface supports multiple drives in a variety of formats. An optional monochrome 80-column board (\$99.95) is due for the holidays.

\$199—256K, \$349—1Mb. ICD Inc., 1220 Rock Street, Rockford, IL 61101. (815) 968-2228.

CIRCLE 159 ON READER SERVICE CARD

FEET PROSE

SPEECH/SOUND

RAMBO XL

Make your 800XL or 1200XL twice as powerful as a 130XE with the RAMBO XL, a 256K hardware modification for XL computers. It makes your computer compatible with the 130XEs RAMdisk in "CPU mode" for extended memory, meaning that the Atari DOS 2.5 RAMdisk and BASIC XE can run on your XL after installation of RAMBO XL.

\$49.95, \$30 installation, \$28 for 256 RAM chip set. ICD Inc., 1220 Rock Street, Rockford, IL 61101. (815) 968-2228.

CIRCLE 159 ON READER SERVICE CARD

RAMCHARGER

Enhance your 8-bit computer's memory with RAMcharger RAMboards (256K, 512K or 1Mb memory). Installation is simple. Just plug in the board—and get 288K available with Synapse Software's SynCalc and SynFile+, up to 8,000 sectors of RAMdisk, and included MYDOS software.

\$149.95—256K; \$199.95—512K; \$299.95— 1Mb. Magna Systems, 147-05 Sandford Avenue, Suite 4E, New York, NY 11355. (718) 939-0084.

CIRCLE 160 ON READER SERVICE CARD

THE RAT

If you're clicking on icons and getting things done on your Atari without touching the keyboard, chances are you're using an ST. Now you can have that same convenience on your 8-bit computer with The Rat from Zobian Controls. Software such as Super 3-D Plotter, RAMbrandt and AtariArtist are Rat-compatible, and more is on the way.

\$69.95. Zobian Controls, P.O. Box 6406, Wyomissing, PA 19610. (215) 374-5478.

CIRCLE 161 ON READER SERVICE CARD

MICROFLYTE JOYSTICK

Instead of renting a real airplane for an hour, why not pick up the MicroFlyte ATC Joystick and take control of Sublogic's Flight Simulator II with a minimum of keystrokes? This self-centering *analog* joystick uses two potentiometers to recognize the direction and magnitude of a turn—it helps you fine-tune your flying. However, it works only with Flight Simulator II or the programs you write yourself.

\$59.95. MicroCube Corp., P.O. Box 488, Leesburg, VA 22075. (703) 777-7157.

CIRCLE 164 ON READER SERVICE CARD

EPYX 500XJ JOYSTICK

It's curved to fit your hand. The fire button is angled for your trigger finger. Shaft switches allow you to hear each move of the stick. And you might have to run it over in the car to break it. The 500XJ joystick has been a real joy to the **Antic** staff and saved us a lot of cramped hands. Our game scores seem to be better too.

\$16.95-\$19.95. Epyx Inc., 600 Galveston Drive, Redwood City, CA 94063. (415) 366-0606.

CIRCLE 165 ON READER SERVICE CARD

U. S. DOUBLER

The U.S. Doubler adds 128 bytes of RAM and a new ROM chip to your Atari 1050 disk drive, allowing true double density with 256-byte sectors. The drive can still be used in its normal single or enhanced density modes. When packaged together with SpartaDOS the price rises to \$69.95. Version 1-4 allows your drive to be configured as drive 1 to drive 4. Version 5-8 allows you to configure the drive as 5 to 8, which is useful if you have a RAMdisk.

INTERFACE

P:R: CONNECTION

The Atari 850-compatible P:R: Connection is a better mousetrap. Connections, software and applications remain the same. But the P:R: Connection gets its power from the host computer, eliminating need for an external power supply. The P:R: connects your Atari to a printer, a modem and one other device, such as a serial EPROM programmer. The outstanding documentation contains the complete R: driver source listing.

\$69.95, 48K disk. ICD Inc., 1220 Rock Street, Suite 310, Rockford, IL 61101-1437. (815) 968-2228.

VOICE MASTER

The Covox Voice Master is to sound what Computereyes is to pictures: it is a sound digitizer. This hardware-software system grabs sounds, converts them into digital code (in any of three speeds) and stores them for manipulation in various interesting ways. The Voice Master lets you compose digital music by humming or singing into the Covox headset/microphone. It also features surprisingly good speech recognition. Included BASIC demonstration programs are a talking alarm clock, a voice-recognizing calculator and a blackjack game that listens and talks back.

\$89.95, 48K disk. Covox Inc., 675-D Conger Street, Eugene, OR 97402. (503) 342-1271.

CIRCLE 167 ON READER SERVICE CARD

sound-activated controller that plugs into the joystick port and listens for sounds, particularly low-pitched tones. It continuously translates the sound volume into a value for the paddle register. The Sound-Mouse responds to the sounds—perhaps your program can be activated with a shout or hand clap. You could use the SoundMouse as a joystick trigger with

Bulletin Board 24 hrs. - 212-828-765

CARINA - THE BETTER BBS

Presenting the most powerful bulletin board ever written for the Atari 8-bitcomputer. The Carina BBS is absolutely the most expandable bulletin board for your Atari. It has features that you will find on most bulletin boards plus many other features that make telecommunications easier, more fun, and a lot less monotonous.

WHY IS THIS BBS SO MUCH BETTER?

The power of this system is mostly attributed to the Modem Operating Environment. It makes possible the ability to run BASIC programs WITH LITTLE OR NO MODIFICATION on your bulletin board. It also allows you as the Systems Operator (SysOp) of the Carina BBS to drop into BASIC ON-LINE at any time and make modifications to your program from across the country if need be. No other Atari bulletin board has this feature.

YOU MEAN I CAN CHANGE THE PROGRAMS?

Yes, the Modem Operating Environment eliminates the need to perform modem operations. The bulletin board is written in understandable BASIC and is, in fact, designed with modification in mind. The Carina BBS is also module based. This means you are no longer restricted by the memory of your computer, but rather by the amount of on-line storage on your disk drives and your ramdisk. The Carina BBS itself is not 1 but 7 separate programs. It is a massive system that can be expanded beyond your imagination.

WHAT PROGRAMS COME WITH IT?

The modules included are: The waitcall module which performs user logon/logoff functions, the bulletin board itself which controls all message bases and databases, the file-transfer module with X-Modem upload/download transfer protocol, the message editor (with extensive word processor-like functions), the SysOp commands with the most powerful functions available for any bulletin board on-line, the sub-commands module which contains miscellaneous extra functions, and an on-line trivia game. The Carina BBS has a total of 44 commands including 17 SysOp functions. It is easy to add any other modules of your own, plus there is plenty of room to add any other functions in different modules.

WHAT ELSE CAN IT DO?

- Runs at 300, 1200, or 2400 baud in ASCII and/or ATASCII modes
- Works with Hayes (or compatable) modems, all Supra (MPP) modems including Supra 1200 with interface, Avatex 1200, Q-MODEM, and now the XM301 and 1030 (with ring detector)
- Works with the 850 interface, ATR8000, or P:R:Connection
- Supports the R-Time 8 cartridge
- · Also works on hard drives or slave drives of any size, in any density
- Works with most DOS's and most BASIC languages (Atari, XL, or XE)
- Run BASIC programs with little or no modification, program in BASIC, or even go to a ram-resident DOS (Like SpartaDOS) on-line!
- Electronic mail system
- Uses macros or full-word commands
- Allows editing of messages already posted
- Virtually an unlimited number of message bases, and databases
- Can work with subdirectories
- Read new mail function
- On-Line games (you can convert your own games to work easily too)
- A day calculating clock plus a 5 line status window at the top of the screen holding 16 items of user information
- · Message editor with many editing commands and word-wrap
- Self-Compacting message bases eliminating the need for constant maintenance.
- · Automatic validation and access control configuration.

For an indepth on-line demonstration, call 305-793-2975

Price Reduction:

Now, get the Carina BBS at the reduced price of only \$55.00 (this includes shipping and tax where applicable).

Supra (MPP) 300 baud modem owners include an extra \$10.00 for the Bitwise System's MPP-Hayes emulator. And now, XM301/1030 (with ring detector) owners, also add \$10.00 for the Bitwise System's XM301-Hayes emulator. Please specify Modem type when ordering.

OFTWARE GRAPHICS

RAMBRANDT

RAMbrandt paint software produces color images with KoalaPad or Atari Touch Tablet in five graphics modes and multiple text fonts. You can load pictures from Moviemaker, Micro Illustrator, Micro-Painter and Computereyes. The window mode lets you vertically or horizontally rotate, flip (for T-shirts), animate your picture, or scale

it up or down in size. RAMbrandt has unlimited user-defined brushes, 130XE RAMdisk support and printer dumps for Epson, Star Micronics, C. Itoh, NEC and compatibles. Its Okimate 10 color printer dump produces fine color images. New **Solid Object Module** (\$15.95, AP082) adds easy 3-D object creation to RAMbrandt.

\$19.95, 48K disk. The Catalog, AP0157.

COMPUTEREYES

Connect your Atari to any video camera or VCR and you'll get a digitized black-

connect time.

112 E. Market Street, York, PA 17401. (717) 848-2660.

CIRCLE 175 ON READER SERVICE CARD

GENIE

GEnie, the General Electric Information Service, is the newest and least expensive online service, costing \$5 an hour on evenings-weekends, even for 1200-baud modems (\$10 for 2400-baud). Weekday rates are more business-oriented, \$25 per hour for 300/1200 baud and \$45 for 2400 baud. Upload time is free. The SIG-like Atari RoundTable software library has 11 categories and is growing fast.

401 N. Washington Street, Rockville, MD 20850. (800) 638-9636.

CIRCLE 176 ON READER SERVICE CARD

and-white image in less than six seconds. The image can then be modified with standard graphics software. The Computereyes package includes an interface module, software and an owner's manual. For \$399.95, you also get a black-and-white video camera.

\$129.95, 48K disk. Digital Vision, Inc., 14 Oak Street, Suite 2, Needham, MA 02192. (617) 444-0940.

CIRCLE 178 ON READER SERVICE CARD

SUPER 3-D PLOTTER

With this 3-D design and animation program, all you need to do is draw straight-line images from point to point. The program remembers the points of your line drawing, adjusts, redraws and page-flips the completed new image, resulting in a smooth, impressive animation display.

\$39.95, 48K Disk. Elfin Magic Company, 23 Brook Place, East Islip, NY 11730. (516) 581-7657.

CIRCLE 179 ON READER SERVICE CARD

ENVISION

Envision is "the RAMbrandt of character graphics," giving you multi-screen, eightway scrolling pictures and letting you build animations of up to 128 frames at 10 speeds. Envision's 50-plus commands give you total control over the Atari's text modes. And the program supports GTIA modes 9 and 11. It can create standalone pictures from pictures created by any popular paint program, or produce BASIC and Assembler source code.

\$19.95, 48K disk. The Catalog, AP0185.

VIRTUOSO

Create full-color graphics with the keyboard, joystick or touch tablet, move them in any direction at different speeds, instantly make them larger or smaller while they're moving—and turn them 360 degrees with Virtuoso Software. If that's not enough, put music in motion. The graphics you create and the movements you choose, simultaneously produce and control music. Text can be inserted too.

\$49.95. Virtusonics Corp., 125 Duke Ellington Blvd., New York, NY 10025. (800) 528-6060.

CIRCLE 180 ON READER SERVICE CARD

ARTIST UNLEASHED

Using a joystick, KoalaPad or the Rat to control the onscreen painting dot, you can create high-resolution Graphics 8 pictures for saving to disk, inserting in BASIC programs or printing on an Epson-compatible. Enhance or alter the pictures by stretching, inverting, displaying in inverse video, changing colors and rotating in 90-degree increments. The picture editor breaks down a picture into grids for detail work. Used with MTS's Layout (\$39.95), you can compose newsletters, posters and advertising materials.

\$49.95, 48K disk. MTS Software, P.O. Box 623, Williamsville, NY 14221. (716) 634-0578.

CIRCLE 181 ON READER SERVICE CARD

GAMES

STAR RAIDERS II

More of a sequel than an update to the original Star Raiders, this game has you jumping between two star systems in your ship, the Liberty Star, and wiping out hordes of Zylons in an attempt to save the Celos IV system. Just fire away at the bad guys, but don't run out of fuel.

\$19.95, 48K disk. Atari Corp., 1196 Borregas Avenue, Sunnyvale, CA 94086. (408) 745-2000.

ou don't need an ST to run high-powered software. Your Atari 400, 800, 800XL, 1200XL or 130XE can compute circles around others with these quality packages. – Don't let our low prices fool you – Super Quality doesn't have to be over priced

DIGITIZE YOUR WORLD Now you can connect your Atari to a wide range of external interfaces that you can build. This how-to book (over 150 pages) includes all the instructions needed to build a light pen, household appliance controllers, alarm systems, light and motion detectors, voice recognition, and much, much more. The book **Your Atari Comes Alive** includes detailed schematics and instructions for each device. The disk includes the BASIC and Assembler programs to run them. Create your own exciting devices and save money!

Your Atari Comes Alive - Introductory Price \$24.95

PARROT

DIGITIZING POWER

The hardware & software you need to digitize real world sounds and play them on your computer, Make your Atari speak in your own voice

record and play sounds from a complete orchestra.
Play the digitized instruments and sounds from your keyboard, or put them in your own BASIC programs. PARROT is now being used for special effects by professional musicians. Turn your Atari into a digital sound sampler and keyboard. Everything you need to record and play digital sounds \$39.95

Additional pre-recorded sound tracks \$4.95/with purchase of PARROT.

COMPUTEREYES

Feed the pictures from your video camera or VCR into your computer and save the images as a graphics screen. Put your picture in your own programs, or digitize your favorite movie star. Our COMPUTEREYES and MAGNIPRINT II+

combination special lefs you print your pictures in 16 shades of grey with incredible detail. Combine the features of MAGNIPRINT II + and COMPUTEREYES for digitizing power that can't be beat. Koala Pad, Touch Tablet compatible.

COMPUTEREYES and MAGNIPRINT II + COMPUTEREYES ONLY \$ 99.95 COMPUTEREYES, B/W VIDEO CAMERA, MAGNIPRINT II + ,

and CABLE \$329.95
GRAPHICS 9 CAPTURE SOFTWARE

Easily the most powerful and versatile printer package available. Accepts screens from Koala Pad, Print Shop, RAMbrant, MicroPainter, SynGraph, Touch Tablet, Typesetter, Graphics Moster, many, many others. Prints in literally hundreds of sizes, shapes, shades, and distortions, including 6 ft. poster printing. Create detail and resolution thought impossible on a standard dot matrix printer. Supports 16 shades of grey and even color printing (you need color ribbons or color carbons for that). Touch-Up your pictures with multi-size and multi-font text Works on STAR, Gemini, Panasonic, CITOH, NEC, EPSON or compatible printers. (850 interface or equivalent required). Easily the most powerful and versatile printer

Incredibly priced for only

OFTWARE

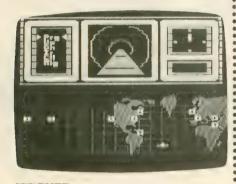

warlord's castle by thwarting his guards with your karate know-how, using the joystick to kick and punch. Karateka has cartoon-quality graphics, realistic even to the swishing robes as you make your moves.

\$29.95, 48K disk. Broderbund Software, 17 Paul Drive, San Rafael, CA 94903. (415) 479-1170.

CIRCLE 183 ON READER SERVICE CARD

HACKER

Not unlike the film "War Games," you've broken into the computer of a large multinational corporation, where you discover dirty deeds. Make deals with foreign spies and pick up clues, all very hush-hush and all from the comfort of your chair.

\$34.95, 48K disk. Activision, P.O. Box 7286, Mountain View, CA 94039. (415) 960-0410.

CIRCLE 184 ON READER SERVICE CARD

ULTIMA IV

The latest entry in Lord British's popular

graphic fantasy role-playing adventure series lets you carry on complete conversations with other characters as you try to attain perfection in the values of honesty, compassion, valor, spirituality, humility, sacrifice, justice and honor, after which you go to the final challenge: to become an Avatar.

\$59.95, 48K disk. Electronic Arts, 2755 Campus Drive, San Mateo, CA 94403. (415) 571-7171.

CIRCLE 185 ON READER SERVICE CARD

THE EIDOLON

One of the latest Lucasfilm computer games, The Eidolon sends you through a maze of caverns generated by fractal mathematics. Your goal in Epyx's point-of-view fantasy role-playing game is to find and vanquish a dragon on each of 10 levels.

\$29.95-\$39.95, 48K disk. Epyx Inc., 600 Galveston Drive, Redwood City, CA 94063. (415) 366-0606.

CIRCLE 184 ON READER SERVICE CARD

KORONIS RIFT

It's 2049, and you're exploring the Koronis Rift for super weapons left by the Ancients. If you can get by the saucer people and figure out how to use the weapons, you're in great shape. If not, you're Saucer People Chow. In this Lucasfilm game, you'll get plenty of help from your science and retriever droids as you travel the fractal landscape of the planet in your surface rover.

\$29.95-\$39.95, 48K disk. Epyx Inc., 600 Galveston Drive, Redwood City, CA 94063. (415) 366-0606.

CIRCLE 184 ON READER SERVICE CARD

WISHBRINGER, SPELLBREAKER, BALLYHOO

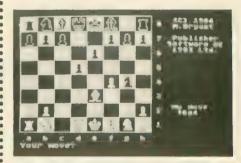

Wishbringer (\$34.95), Infocom's second introductory-level text adventure, opens on the New England coast, where you're dispatched to deliver a letter to an eccentric old lady. Upon delivery, you are thrust into Witchville to rescue her cat, kidnapped by a sorceress called The Evil One. Your only aid is Wishbringer, a stone that grants seven wishes—don't misuse it.

Spellbreaker (\$49.95) concludes Infocom's Enchanter and Sorcerer trilogy. You're now a member of the Circle of Enchanters and your only clue to the ominous disappearance of magic is the discovery of a strange white cube. As you go on, further cubes provide invaluable hints.

In Ballyhoo (\$39.95) you're loitering under the big top after a performance of the Traveling Circus That Time forgot. You overhear a plot to kidnap the ringmaster's daughter. You've got to find her, but you must be stealthy and willing to slip into any disguise.

Infocom, 125 CambridgePark Drive, Cambridge, MA 02140. (617) 492-6000.

CIRCLE 186 ON READER SERVICE CARD

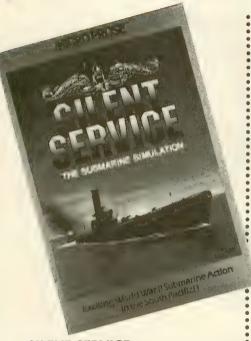

COLOSSUS CHESS

Colossus Chess is for any chess-lover, whether you're a beginner or a master. The space bar toggles between two screens—one showing the board and the other showing Colossus' "brain" considering thousands of moves. Onscreen elapsed-playing-time clocks add realism, and a game can be saved to disk to be picked up later.

\$15.95, 48K disk. The Catalog, APO161.

OFTWARE

SILENT SERVICE

This impressive simulation of World War II submarine operations in the Pacific takes you right to the bridge of a sub as your periscope searches the ocean for enemy vessels

\$34.95, 48K disk. MicroProse Software, 120 Lakefront Road, Hunt Valley, MD 21030. (301) 667-1151.

CIRCLE 188 ON READER SERVICE CARD

F-15 STRIKE EAGLE

Launch into aerial combat with this realistic, joystick-controlled computerization of seven sky battle-zones over the Middle East and Vietnam. You'll get state-of-the-art weapons systems, computerized radar, eight supersonic guided missiles, 18 bombs and a 20mm cannon.

\$34.95, 48K disk. MicroProse Software, 120 Lakefront Road, Hunt Valley, MD 21030. (301) 667-1151.

CIRCLE 188 ON READER SERVICE CARD

FLIGHT SIMULATOR II

Zoom your Piper Cherokee Archer around Chicago, New York, Seattle, Los Angeles or any of 80 realistic airports in this advanced flight simulation program. This sophisticated pilot training software provides believable flying practice after you learn the precise and detailed operating instructions. New this year are additional **Scenery Disks** including San Francisco and Tokyo-Osaka (\$19.95 each) and a sixdisk Western U.S. set for \$99.95.

\$49.95, 48K disk. Sublogic Corporation, 713 Edgebrook Drive, Champaign, IL 61820. (217) 359-8482.

CIRCLE 187 ON READER SERVICE CARD

NAM, COLONIAL CONQUEST, BATTALION COMMANDER

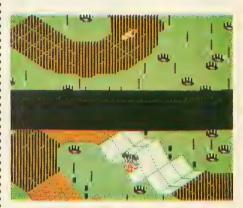

Along the same lines as Conflict in Vietnam, SSI's Nam pits one player against a computer as tough as the Viet Cong and North Vietnam army units it simulates in six basic scenarios.

Battalion Commander, another solitaire game, lets players explore the strategy and tactics of the fictional battlefields of the 1990s and essentially design their own battle. Select a battlefield from 40 different terrain maps.

Colonial Conquest immerses as many as six players in the turbulence of the birth of the modern world. Besides being entertaining, the historic scenarios provide some interesting insights into the dynamics of imperialism as it grew from the strengths and weaknesses of the major nations.

\$39.95 each, 48K disk. Strategic Simulations Inc., 1046 N. Rengstorff Avenue, Mountain View, CA 94043. (415) 964-1353.

CIRCLE 189 ON READER SERVICE CARD

RACING DESTRUCTION SET

Build your own racetracks and race nine different kinds of vehicles—even choose the gravity conditions. You'll have an endless variety of races in this digital slot-car set. Racing Destruction Set also has 50 built-in tracks, and you can save 58 tracks per disk.

\$14.95, 48K Disk. Electronic Arts, 1820 Gateway Drive, San Mateo, CA 94404. (415) 571-7171.

CIRCLE 185 ON READER SERVICE CARD

CROSSWORD MAGIC

Designing your own crosswords can be just as challenging as solving them, and with crossword puzzles being so popular, Crossword Magic could be an income-producing tool as well as a fun challenge. Crossword Magic takes the drudgery out of trial-and-error testing of up and down word patterns—it's a word processor dedicated to the connection of words sharing one or more letters. You start with a 3-by-3 grid, which adjusts and increases in size to fit your words.

\$39.95, 48K disk. Mindscape Inc., 3444 Dundee Road, Northbrook, IL 60062. (800) 221-9884.

MICROLEAGUE BASEBALL

Pit the greatest teams against each other, such as the 1927 Yankees and 1975

Astra is excited about the "NEW" Atari... That's right, we are excited, but not just about the new ST computers... We are supporting the 8 bit Atari line with four precision disk drives!

The 1001 is where we start. This is where the other drive companies stop. The 1001 is a single or TRUE double density, single sided drive. It has a built in printer interface. The 1001 has a direct drive motor, not a belt driven one.

XXXXX

You say you need more? You are looking for a drive that is single or double density and double sided too. You also want a built in printer interface and direct drive motor with precision formatting. Then this is...

"The ONE" by Astra

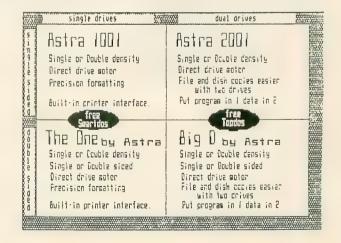

XXXXX

Perhaps you don't need to keep 360 kbytes of data on a single disk. You prefer the utility of a dual drive system. Word processing, spreadsheets, and data bases are all made more powerful and easier to use with a dual drive system. And we have... the "2001" by Astra

Still not enough? You want brute storage capacity!
You want a single or double density, single or double
sided, dual drive system. You want...
the "BIG D" by Astra
720 kbytes of storage in one system!

*ASTRA SYSTEMS, INC.

2500 South Fairview/Unit L Santa Ana, California 92704 **(714) 549-2141**

O.K. we are also excited about the ST line. As proof we offer...

System HD+

20 megabyte hard drive 1 megabyte 3.5" microfloppy

All in one system!

How is that for excitement?

Add this system to your 520ST or 1040ST system and enjoy the power and utility of a great computer with enough storage to tackle the job.

Lighted front switch
Lighted busy light
Surge protected
Muffin fan for super cooling
5 1/2" wide * 4 1/2" high
12" long

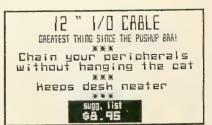

Yep, it's coming soon!

Centronics printer cable
for

ash your dealer...\$14.95

OFTWARE

Reds—or even play them against the pitiful Washington Senators of 1955—in this baseball lover's delight. MicroLeague Baseball lets you hit-and-run, attempt squeeze plays and double steals, pitch out and make several other moves.

\$39.95, 48K disk. MicroLeague Sports Association, 2201 Drummond Plaza, Newark, DE 19711. (302) 368-9990, (800) PLAYBAL.

CIRCLE 193 ON READER SERVICE CARD

HARDBALL

This arcade-style baseball game features enticing graphics and 3-D perspective from three views. The joystick is used to choose lineups, select pitches and move fielders.

\$29.95, \$48K disk. Accolade, 20833 Stevens Creek Blvd., Cupertino, CA 95014. (408) 446-5757.

CIRCLE 194 ON READER SERVICE CARD

COMMUNICATIONS

HOMEPAK

This package incorporates HomeTerm, a simple but powerful telecommunications program that accesses online services and bulletin boards; HomeFind, which stores information and instantly retrieves it; and HomeText, an easy word processor. All three programs can pass information to each other.

\$49.95, 48K disk. Batteries Included, 30 Mural Street, Richmond Hill, Ontario, L4B 1B5, Canada. (416) 881-9941.

CIRCLE 198 ON READER SERVICE CARD

BACKTALK

With Backtalk, your Atari can autodial other BBS's in the middle of the night and upload or download files in XMODEM (with or without Cyclical Redundancy

Checking), AMODEM (Atari-style Xmodem) or Xon/Xoff). 130XE owners can save money on CompuServe with Backtalk's RAMdisk support. You have total modem compatibility and you can create unlimited macro libraries.

\$19.95, 48K disk. The Catalog, AP0154.

PLATO LEARNING PHONE

This cartridge makes your Atari work like a Plato terminal. Plato is the largest educational online service in the world, devoting over 200,000 hours to languages, mathematics, sciences and more.

\$24.95, 16K cartridge. Atari Corp., 1196 Borregas Avenue, Sunnyvale, CA 94086. (408) 745-2000.

CIRCLE 182 ON READER SERVICE CARD

EDUCATION

SPACE BASE

A must if you own a telescope. This graphically stunning scrolling map and space atlas offers detailed scientific data for hundreds of the brightest stars. With its extensive documentation, the program is equivalent to a college-level introductory astronomy class.

\$19.95, 48K disk. The Catalog, AP0142.

ATARI PLANETARIUM

Look at the stars tonight—or any night between 9999 B.C. and A.D. 9999—from anywhere on Earth with Planetarium. At up to 64 times normal speed, forwards or backwards, view any celestial event, from the appearance of Halley's comet over Australia on April 5, 1986 to the earliest recorded solar eclipse.

\$24.95, XL/XE and disk. Atari Corp., 1196 Borregas Avenue, Sunnyvale, CA 94086. (408) 745-2000.

CIRCLE 182 ON READER SERVICE CARD

RAINY DAY GAMES

Younger children will love the company of Ted Bear on Baudville's Rainy Day Games. Ted always plays fair and he shows little ones how to have fun playing such favorites as Concentration, Old Maid and Go Fish.

\$29.95, 48K disk. Baudville, 1001 Medical Park Drive, S.E., Grand Rapids, MI 45906. (616) 957-3036.

CIRCLE 195 ON READER SERVICE CARD

QUIZMASTER

Quiz anybody on any subject, from riddles to nuclear physics, with the Quizmaster Construction Set. Create your own multiple-choice quizzes with an unlimited number of questions. As the screen displays a question, a counter rapidly counts down from 500, and you get the number of points equal to the counter display when you press the key for the right answer.

\$9.95, 48K disk. Ezuse Software, 2850 Enea Way, Antioch, CA 94509. (415) 754-6026.

CIRCLE 196 ON READER SERVICE CARD

GRADESCAN

This user-friendly, menu-driven program helps a teacher track students, classes and grades. Among its options are Examine Averages, Examine Class Averages, Correct or Revise Records, and Print Reports.

\$24.95, 48K disk, requires BASIC. C. Robert Blum, 1722 Golden Court, Crofton, MD 21114. (301) 261-3177.

CIRCLE 197 ON READER SERVICE CARD

EARTH VIEWS

Earth Views is an electronic world globe—a computerized atlas and exciting adventure game that features detailed high resolution maps and a 3-D view of earth rotating on any axis. Call up 250,000 different views at the touch of a button.

\$19.95, 48K disk. The Catalog, AP0141.

OFTWARE

BBS EXPRESS!

The newest member of the Express! family, which includes 1030, 850 and MPP Express! programs. The 1030 version of BBS Express! also runs on the new Atari XM301 modem, supporting both XMODEM and ASCII downloading. Sysops can customize bulletin board through powerful features.

BBS Express! can run using all currently available memory upgrades, and full remote sysop capabilities can be accessed from anywhere in the world.

\$39.95, 48K disk. Orion Micro Systems, 2919 Ennismore Court, Richmond, VA 23224. Specify 850 or 835/1030/XM301 version.

CIRCLE 199 ON READER SERVICE CARD

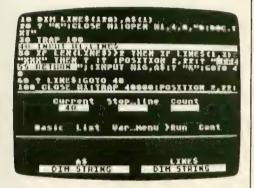

LANGUAGES & TOOLS

BASIC XE

BASIC XE from O.S.S. runs programs at least twice as fast as Atari BASIC. BASIC XE has powerful new statements, automated editing features and extra utilities. This language harnesses the full 128K memory of the 130XE computer.

\$79, cartridge plus 48K disk. Optimized Systems Software, 1221B Kentwood Avenue, San Jose, CA, 95129. (408) 446-3099.

CIRCLE 200 ON READER SERVICE CARD

BASIC VIEW

Lighten your debugging load with Basic View, a machine language programming utility that traces BASIC programs as they run. As each line of your code is executed, the BASIC tracer highlights it in a screen window, enabling you to find bugs right away.

\$20, 48K disk. Softview Concepts, P.O. Box 1325, Lisle, IL 60532. (312) 968-0605.

CIRCLE 204 ON READER SERVICE CARD

ACTION!

Fast and powerful, ACTION! blends elements of Pascal and C, but is much easier to program on the Atari. The ACTION! screen editor makes programming a joy and was the basis of Batteries Included's

PaperClip word processor. Particularly outstanding for speedy graphics and game programs.

\$79, 16K cartridge. Optimized Systems Software, 1221B Kentwood Avenue, San Jose, CA 95129. (408) 446-3099.

CIRCLE 200 ON READER SERVICE CARD

MAC/65 ASSEMBLER EDITOR

MAC/65 is the assembler for programmers who are serious about assembly language. MAC/65 is compatible with the Atari Assembler Editor, as long as you don't use MAC/65's powerful extra commands. It contains a speedy compiler and an excellent debugger.

\$79, 16K cartridge. Optimized Systems Software, 1221B Kentwood Avenue, San Jose, CA, 95129. (408) 446-3099.

CIRCLE 200 ON READER SERVICE CARD

DEEP BLUE C

This C compiler code runs on other computers with only minor complications, making it one of the most transportable languages around. Faster than BASIC, Deep Blue C features pointers, recursive functions and high-level control functions. **Mathlib** (\$19.95, AP0132) is a library of math functions designed to enable your Deep Blue C Compiler to do floating-point calculations.

\$19.95. The Catalog, AP0114.

KYAN PASCAL

Kyan Pascal has all of the features of standard Pascal, the teaching and programming language widely used in colleges. Many of the Kyan Pascal programs you write on your Atari can run on the mainframe computers at your school or office. It comes with a built-in editor, native code compiler, macro assembler and a 300-page tutorial manual.

\$69.95, 48K disk. Kyan Software, 1850 Union Street, Suite 183, San Francisco, CA 94123. (415) 626-2080.

CIRCLE 201 ON READER SERVICE CARD

ADVAN BASIC

Never has a BASIC given the programmer such effortless command of the special sound and graphics capabilities of the Atari. Advan BASIC is a speedy compiled BASIC with powerful new commands and built-in Player/Missile graphics.

\$39.95, 48K disk. Advan Language Designs, P.O. Box 159, Baldwin, KS 66006. (913) 594-3420.

CIRCLE 202 ON READER SERVICE CARD

EXTENDED D.D.T.

An outstanding assembly language debugger made better with a built-in miniassembler, over 150 system symbols for more understandable disassembly, and the ability to deposit to graphic control areas without affecting the screen.

\$15.95. The Catalog, AP0171.

FLOATING POINT PACKAGE

The new Floating Point Package works with the MAC/65 assembler from Optimized Systems Software. Ambitious assembly language programmers can now use the precision of floating point mathematics to create more powerful and accurate software.

\$19.95, The Catalog, AP0186.

Don't be Puzzled

REGENT BASE:

A Relational GEM Database

Solve your business and personal needs with our easy to use database. Regent Base makes full use of the GEM system so using any of the available templates is as easy as dragging the Mouse and pressing a few keys. Included with Regent Base are two templates: A Mailing List Manager and A Checkbook Manager. Other templates available include: Accounts Receivable, Payables, General Ledger, Customer Billing, and Invoicing. Many other templates are also available. Regent Base supports over fifteen printers and even "mail-merges" with Regent Word II.

REGENT WORD II: GEM Word Processor with Spelling Checker

Power through any word processing needs with Regent Word II. Regent Word II makes full use of the GEM system, so editing is powerful and easy! As text is typed Regent Word II reformats the document on the screen to show exactly what will be printed. Bold, Superscripted, Subscripted, Italic and Underlined text are displayed while editing. A 30,000 word Spelling Checker is built in. Insert or delete words — up to 100,000 — in Regent Word II's spelling dictionary with the click of a mouse button! Regent Word II "mail-merges" with Regent Base for instant form letters. Online Help Menus and over fifteen printer drivers are built in.

The Perfect Match for the Atari ST

REGENT SOFTWARE 7131 Owensmouth, Suite 45A Canoga Park, CA 91303 (818) 882-2800

A REVOLUTION IN FLYING

THE MicroFlyte JOYSTICK

A unique product designed for use with FLIGHT SIMULATOR II^{TM} to give you accurate and proportional control. Includes control Yoke, Throttle, Flaps, Brakes, Gun and Elevator trim.

OTHER FEATURES:

- Software program drivers for other Flight programs available soon
- Use with User generated BASIC programs
- Use with User generated assembly language programs

This is the **ONLY** fully proportional, continuously variable joystick control for Flight Simulator II. Now your home computer can be a truly realistic flight simulator.

- "...I flew all over the map with one landing after another and no mishaps." K.C.
- "...I am getting more use out of Flight Simulator now and will continue thanks to your joystick" R.T.

WARNING: Use of the MicroFlyte joystick may cause Flight Simulator addiction. Order with caution.

WORD PROCESSING

Print Shop. Create designs and pictures with your KoalaPad or Atari Touch Tablet and compress all or part of your work into Print Shop format. The Print Preview feature lets you choose pattern fills and solid black or white to replace colors in the printout. Graphic Shop requires Broderbund's Print Shop.

\$19.95, 48K disk. The Catalog, AP0156.

PRINT SHOP

Design your own greeting cards, banners, letterheads, logos and more with Broderbund's versatile Print Shop (\$49.95). You don't need computer graphics experience: Print Shop will guide you through the process. Design elements include eight typestyles, nine border designs, a graphics editor that lets you create original pictures, and the ability to superimpose text over any design.

Volumes I, II & III of the **Print Shop Library** (\$24.95 each) are collections of graphics, ranging from presidents to plumber's helpers, from chess pieces to choppers. These illustrations feed right into Print Shop.

The new **Print Shop Companion** (\$49.95, 64K disk) adds calendars, enhanced borders, fonts and fill-in patterns to the basic program.

48K disk. Broderbund Software, 17 Paul Drive, San Rafael, CA 94903. (415) 479-1170.

CIRCLE 205 ON READER SERVICE CARD

PRINT WIZ

This printer dump mixes text and graphics for hard copies from most popular printers and can print sideways on a page. Print Wiz includes special handlers for popular graphics programs and can change type size directly from your keyboard.

\$29.95, 16K disk. Allen Macroware, P.O. Box 2205, Redondo Beach, CA 90278. (213) 376-4105.

CIRCLE 206 ON READER SERVICE CARD

LISTER PLUS, PICTURE PLUS

Stretch your dot-matrix printer to its limits. Lister Plus dumps listed files (including programs) to the printer using any custom character set you choose. Picture Plus manipulates most types of picture files, so you can save them in standard files for use with a BASIC program, or dump them to the printer in any of four sizes.

\$19.95, 48K disk. The Catalog, AP0179.

MEGAFONT II+

MegaFont II+ is a lister program that has won many friends during its four years on the market. It speedily prints files that include graphics or Atari special characters. Megafont is compatible with popular paint programs and supports printers compatible with Epson, C. Itoh and Gemini 10X.

\$25.95. 48K. XLEnt Software, P.O. Box 5228, Springfield, VA 22150. (703) 644-8881.

CIRCLE 220 ON READER SERVICE CARD

TYPESETTER (\$34.95), PAGE DESIGNER (\$29.95), RUBBER STAMP (29.95)

These three related programs form into a flexible and powerful package which lets you mix graphics and text elements that you have created from scratch. This software goes beyond Print Shop and Newsroom in control of the printed page. The array of powerful choices means that you have a lot of commands to learn.

XLEnt Software, P.O. Box 5228, Springfield, VA 22150. (703) 644-8881.

CIRCLE 207 ON READER SERVICE CARD

We write and edit every word at Antic with PaperClip before transmitting the copy to our typesetter via modem. PaperClip is a professional-strength word processor that's easy to learn. Its features include a split screen with cut-and-paste between both windows, one-key macros, readable characters with true descenders, double-column printing, configuration files for several different printers and excellent documentation. A new version for the 130XE contains a spell checker.

\$59.95, 48K disk. Batteries Included, 30 Mural Street, Richmond Hill, Ontario, L4B 1B5 Canada. (416) 881-9941.

CIRCLE 198 ON READER SERVICE CARD

ATARIWRITER+

A disk-based upgrade of the popular AtariWriter cartridge, AtariWriter + now includes a spelling checker and mail merge, as well as allowing 130XE owners to take full advantage of their computers' full 128K memory. AtariWriter + lets you send your file to devices other than "P:"—for instance, you might want to send it to the modem port or to another Atari computer.

\$49.95, 48K disk. Atari Corp., 1196 Borregas Avenue, Sunnyvale, CA 94086. (408) 745-2000.

CIRCLE 183 ON READER SERVICE CARD

FIRST XLENT WORD PROCESSOR

First XLEnt Word Processor is powerful and feature-packed, but beginners can easily learn its basic functions and produce impressive results. The six most useful commands are always available at the bottom of the screen as icons, accessible via joystick or the keyboard. A simple printer driver maker construction set assures full control of your paper.

\$29.95, 48K. XLent Software, P.O. Box 5228, Springfield, VA 22150. (703) 644-8881.

CIRCLE 220 ON READER SERVICE CARD

OFTWARE

PRODUCTIVITY

INSYST!

InSyst! is aimed at the small businessman who needs a complete inventory tracking system. The program is written in compiled ACTION! for speed, but you do not need the ACTION! cartridge. The program allows—even encourages—the use of two drives. The manual is well-written and easy to understand. Includes an Edit/Add screen and Reports and Disk menus. Insyst! supports the 130XE RAMdisk.

\$79.95, 48K disk. SoSoft Software, 2513E Sylvester Road, Albany, GA 31705. (912) 888-0821.

CIRCLE 213 ON READER SERVICE CARD

BUSINESS MANAGER

This is for the small businessman who needs a simple accounting system to track sales and inventory without getting lost in bells and whistles. Written in Atari BASIC, The Business Manager also runs with BASIC XL from OSS. This program takes advantage of the extra RAM in a 130XE.

\$49.95, 48K Disk. Reeve Software, 29W150 Old Farm Lane, Warrenville, IL 60555. (312) 393-2317.

CIRCLE 214 ON READER SERVICE CARD

INVENTORY MASTER

This business inventory package allows 1,700 items per disk and has five-second retrieval, multiple vendor history and five standard reports. Up to 12-digit part numbers are supported. Purchase orders and product invoice reports automatically update the records.

\$89.95, 48K disk. Royal Software, 2160 W. 11th Avenue, Eugene, OR 97402. (503) 683-5361.

CIRCLE 215 ON READER SERVICE CARD

ELITE PERSONAL ACCOUNTANT

This personal finance package handles 79 categories divided into income, expense, asset and liability groups, and contains 17 different transaction codes. Its extensive HELP facilities are easily accessed without disturbing work in progress, and you can use three drives for data disks.

\$48.95, 48K disk. Elite Software, 14897 Interurban Avenue S., #60, Seattle, WA 98168. (206) 246-5122.

CIRCLE 208 ON READER SERVICE CARD

CALC MAGIC

This spreadsheet is a complete package, featuring programmable macros enabling you to run automated sequences, the ability to quickly test multiple "what-if" conditions, pop-up menu windows and several math functions, including mean, standard deviation and variance. Standard spreadsheet .DIF files are supported.

\$24.95, XL or XE and disk. The Catalog, AP0177.

MICROMOD

This software defies categorization. It's not just a record-keeping program, but it does the job well. It's not a real inventory program, but it can be with extra modules available from version 3.0. Its power lies in the record-design function providing a package which can be used to track most or all of a small business' records.

\$79.95, six 48K disks. Micromiser Inc., 1635-A Holden Avenue, Orlando, FL 32809. (305) 857-6014.

CIRCLE 212 ON READER SERVICE CARD

B/GRAPH

B/Graph creates pie charts, 2-D and 3-D bar charts, line and area graphs. You can graph three factors with 100 data points each and convert instantly between graph types without re-entering data. B/Graph also reads and writes to VisiCalc .DIF files—enter data with VisiCalc, then graph it with B/Graph.

\$39.95, 48K disk. Batteries Included, 30 Mural Street, Richmond Hill, Ontario L4B 1B5, Canada. (416) 881-9941.

CIRCLE 198 ON READER SERVICE CARD

MILES PAYROLL SYSTEM

This advanced, comprehensive payroll accounting system maintains cumulative totals for up to 50 employees per disk and features complete reporting, check writing and W-2 reporting. Covers all standard

payroll deductions, unemployment insurance and worker's compensation. Easy to update for yearly IRS changes, the Miles package allows weekly, biweekly, semimonthly or monthly pay periods.

\$99.95, 32K disk, requires two disk drives. Miles Computing, 21018 Osborne Street, Building 5, Canoga Park, CA 91304. (818) 341-1411

CIRCLE 218 ON READER SERVICE CARD

MUSIC

MUSIC STUDIO

This easy-to-use music composer will have you playing songs on your Atari within minutes. The Music Studio has five screens from which to compose, edit and play music back. Up to three lines of lyrics can be added to scroll right along with your musical score. Other features include transposition, inserting, copying and moving blocks of music—much like working with word processors. You have a choice of 15 instruments, ranging from flute to drums.

\$34.95. Activision Inc., P.O. Box 7287, Mountain View, CA 94039. (415) 960-0410.

CIRCLE 216 ON READER SERVICE CARD

MUSIC PAINTER

With Music Painter, you can play three different voices at a time. Colored lines placed on a musical staff with your joy-stick represent notes. You can play the music forward or backward, insert or delete spaces, and copy blocks of music anywhere within the song.

\$19.95, 48K disk. Atari Corp., 1196 Borregas Avenue, Sunnyvale, CA 94086. (408) 745-2000.

CIRCLE 182 ON READER SERVICE CARD

MIDIMATE

The MIDIMATE series of hardware and software from Hybrid Arts are professional MIDI sequencers that can control a bank of synthesizers. The MidiTrack II uses your Atari to emulate a 16-track digital recorder with synchronizer and MIDI remote control. There's 16-track overdubbing, autolocate and optimizing.

MIDIMATE Interface Box: \$199.50; MidiTrack II Software, \$149.50. Hybrid Arts, 11928 W. Olympic Blvd., Los Angeles,CA 90064. (213) 826-3777.

GIFTS TO GIVE YOUR FAVORITE ATARI USERS

This year, shop the easy way. No need to stand in line! You will save time, energy and money—and give pleasure every month when you give subscriptions to Antic, the #1 Atari Magazine.

Just order the first subscription (or renewal) at the regular rate and then save almost 30% on all the others. (Come to think of it, now's the time to give yourself the Action Edition with disk. You deserve it! No more tedious typing — just load and go!)

We will send a handaddressed card announcing your gift in plenty of time for the Holidays. What could be easier?

And, since it's the Season, we have a gift for you when you order: The Best of Antic, an anthology of the best games, articles and programs from earlier Antics.

HAGUE JAMES

with TYPO II. If you have trouble typ-

Uncle Henry's Nuclear Waste Dump **DUMPING IT** Your first task is to type in Listing 1, NUCWASTE.BAS, checking each line

Be careful with those toxic cans

That falling can of nuclear waste may land safely this time, but don't count on safe landings for long. Better get used to bombastic explosions.

"I hope you've got insurance," says Uncle Henry as you don your yellow rubber suit. Dump the nuclear waste and make that old cuss rich. Be very careful and you may live through it. This BASIC program works on all 8-bit Atari computers of any memory size, with disk or cassette.

ncle Henry is always trying to make a fast buck, so when he discovered that thousands of corporations desperately needed a place to dispose of their nuclear waste, he started thinking. When Uncle Henry starts thinking, something bizarre usually follows.

And it did! After six months of Uncle brainstorming, Henry celebrated the grand opening of his Nuclear Waste Dump. Hidden behind the local Sloppy Joe Hut, the waste dump was designed to handle vast quantities of discarded radioactive material.

Soon Uncle Henry was rolling in dough, but there was too much waste for one man to handle. So he put an ad in the local paper-which of course you answered.

ing the special characters in lines 9040, 9050 and 9085, don't type them in. Listing 2 will create those lines for you, and store them in a file called LINES.LST. SAVE a copy, plug a joystick into port 1 and RUN the program. When the title screen appears, press [SELECT] to choose your speed -1 for easy, 5 for hard. Then press either [START] or the fire button to begin.

> The Nuclear Waste Dump em-

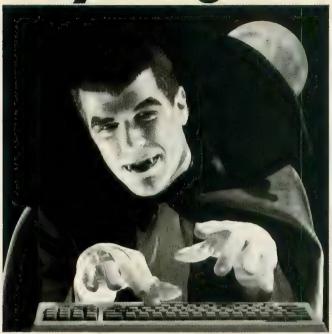

ploys the most advanced method of waste disposal known to mandumping the stuff in a pit. You stand on the edge of the pit. Uncle Henry hands you a container of nuclear waste, which you maneuver above the pit with the joystick. Press the button to drop it. The can falls into the pit and bounces along the pile of waste until it comes to rest. Simple, right? Well, almost...

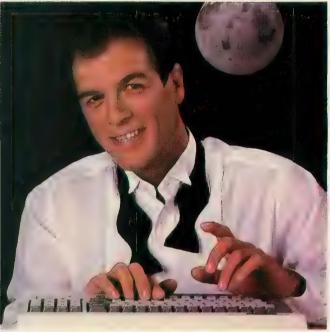

There are three types of waste containers, each having its own distinct shape and color. The catch is that a container may not end up on or next to a container of the same type. If it does, POW-the end of your little corner of the world!

Momentary contact between containers of similar waste is allowed. For example, a container of Type 1 waste continued on page 53

"Computing at night bit into my budget..."

"With GEnie I get more bytes online for less."

\$10.00+ per hour

Most online information networks can drain your resources faster than you can say "Vampire." Not with GEnie, the General Electric Network for Information Exchange. As part of the world's largest commercially available teleprocessing network of General Electric Information Services Company,

GEnie won't bite into your budget. **Evenings, weekends, holidays. Just \$5 per hour.**

With GEnie, you can make friends, schedule meetings, gather facts and figures, set up travel reservations, get the news, be entertained, even shop for a fraction of what other information services charge.

And you get a lot more for your money.

With GEnie's Atari† RoundTable TM Special Interest Group you can discuss the latest in Atari products and accessories; download hundreds of public domain software programs, and participate in exciting and informative online conferences. And, uploads are FREE on GEnie!

There's more!

Meet friends old and new with GEnie's *LiveWire*TM CB simulator or exchange messages with *electronic mail* service. Schedule a trip with the *online travel service*. Fun and learning for the whole family with *Grolier's* electronic encyclopedia.

Play multiplayer and classic games in GEnie's *Game Room.* Get the latest in domestic and international *computing news.* All this and there's more to come. New services are being added each and every month!

\$5 per hour

Only \$18 to register! Save up to 60%!

Check out the chart. Compare the savings for yourself. You'll find GEnie delivers all of your favorite services for an incomparable price, at incomparable savings.

Compare	Services						Pricing			
Save	Travel & Shopping	SIGs/User Groups	Electronic Mail	CB Simulator	News	Games	Registration Fee	Monthly Minimum	Non-prime 300 baud	time rates
The Source	X	X	X	no	X	X	\$49.95	\$10.00	\$8.40	\$10.80
CompuServe	X	X	X	X	X	X	\$39.95	none	\$6.00	\$12.50
GEnie*	X	X	X	X	X	X	\$18.00	none	\$5.00	\$5.00

*Rates and Services shown in effect 6/86. Non-prime time applies Mon.-Fri, 6pm-8am local time, all day Sat., Sun., and nat'l bolidays. Subject to service availability. Additional surcharge applies for 2400 baud service.

With services and savings like these, now you can get more bytes online without incurring blood-curdling costs. Get online with GEnie. Sign up today!

Sign up from your keyboard today. 4 Easy Steps:

- Have your Visa, MasterCard or checking account number ready.
- 2. Set your modem for local echo (half duplex)—300 or 1200 baud.
- 3. Dial 1-800-638-8369. When connected, enter HHH
- 4. At the U#=prompt enter **XJM11939,GEnie** then RETURN.

Need help or more information? No modem yet? We can help. Call **1-800-638-9636.**

VIP Professional

The New Generation Spreadsheet Spreadsheet, Database, Graphics and Macros With Total Lotus 1-2-3™ Functionality

VIP Professional Professional was modeled after the powerful, best-selling Lotus 1-2-3. It not only has the same commands and features, you can also type the same keys to do the same things. It can also read and write Lotus files and run all Lotus macros. So you have immediate access to thousands of worksheet models, hundreds of macro applications, tens of books, scores of training courses, skads of user groups, and bulletin board services to help you make the most of Professional, and share data with the rest of the business world.

Mouse Interface You may elect to use the keyboard for all commands, but Professional also provides a full-featured mouse interface with Icons, Dialogue Boxes, Pull-down Menus, Mouse Ranging, and Scroll Bars. This makes command selection, movement in a sheet, range selection, splitscreen use and a score of other functions much more intuitive and easy to use. What were once complex commands with Lotus are now only a

- Spreadsheet Nothing is left out of this giant 256 column by 8192 row spreadsheet. You get variable column width, split screens, frozen titles, sorting, file combine and extract, copy, move, range naming, local and global cell protection, total printer control, and over 50 special functions to make worksheet creation a snap. And Professional supports up to four megabytes of memory - when you need real power!
- 2. Database Professional includes a powerful data manager to help you arrange, store and analyze information about your home or business. It allows up to 8192 records, with up to 256 fields, and has commands for sorting, data queries and statistical analysis.
- Graphics With Professional's presentation graphics you can give shape to your figures with five different types of graphs - pie chart, bar, stacked-bar, line and XY graphs. With the many options available you can decorate your graph just about any way you wish. You can also print presentation-quality graphs with different fonts, sizes - and colors too!

Macros Professional features macros for automating repetitive tasks. Macros also allow you to program Professional for doing your accounting, inventory control, even school work.

Just Minutes to Learn Professional comes with a user-sensitive handbook for the newcomer. And help is built right into the program. With the handy tutorial you will be able to create your first worksheets in just minutes.

"We shall create a computer that will be a landmark in the history of computers." Alari CORP.

Recently, a writer compared the revolutionary 1040ST™ to Henry Ford's Model T.™

You may be surprised to learn that we were very complimented.

The truth is that both the ST™ and the Model T were designed to be machines of great power and usefulness at a price that was affordable to everybody.

The only difference is that the 16-bit 1040ST uses the most advanced technology in the world. And the result is a computer that has 1024 Kbytes of memory for the amazingly affordable price

of \$999. That's actually less than \$1 per Kilobyte.

We think Henry Ford would be very proud.

The ATARI 1040ST is at your computer retailer now.

ILATARI

The Next Revolution

in Fun Power is Here!

tation system that is itself an original graphic.

Let's keep rolling. With Virtuoso Software you can also generate text -letters, words, copy-change their size and move them around exactly the same way as graphics.

Think you've seen it all? You can split the screen into multiple windows for processing text and graphics. You can run words, song lyrics, or a complete story in one or more

Draw an adventure in the tropics. Make the plane dive, spin the propeller, pull up and away. Bend the palms. Simultaneously, make the red coupe speed toward you, growing larger as it zooms into the night. With music!

windows while your graphics continue to appear in other windows.

There's more to astound you. Everything produced by the Virtuoso Software System-graphics, music, text -can be printed out or sent to other Virtuoso Software owners by phone (modem), using the built-in protocol. And, you can interact with their games or shows.

Best of all, the Virtuoso Software System is so easy to use that there is NO conventional user's manual or complicated documentation. Instead, instructions and choices are offered by menu screens, using simple action words and icons, not codes. You make choices and you can even check out examples to demonstrate or clarify your choices. Nice work.

The price? An incredibly low \$49.95 per disk. Plus, Virtuoso Software includes a pre-set library of graphics, musical compositions and game formats that appear on the screen at the press of a key. Press on.

Free Bonus: CompuServe \$15 Starter Set

Order now and your Virtuoso Software will include the CompuServe INTRO-PAK™, a starter set that gives you instant access to CompuServe plus \$15 credit. It's FREE if you hurry.

4 Ways to Order

Use the coupon, phone us, shop CompuServe's The Electronic Mall™, or ask your dealer. But don't wait. We ship November 10. Get the touch of genius now. What a gift!

CK-U We specialize in Atari® Hardware & Software copy systems.

THE 1050 DUPLICATOR™ The most powerful disk drive copy system ever developed for the ATARI

NEW! 3.0 IMPROVED SOFTWARE WITH MORE COPY POWER NOW AVAILABLE

- The main purpose of the Duplicator is to copy disks! You will be able to copy just about any disk! The copies you make will run on any Atari drive. Copies made with the Duplicator will run on any disk drive, unlike our competition whose copies will only run on their own drives. The Duplicator is fully automatic. You need only insert source and destination disks. Custom formats will be read and in turn reproduced on the backup copy disk. Our device will reproduce any custom format or heavily copy guarded scheme, bad sectors, double sectors, 19 through 24 sector formats will present no problem to the Duplicator.
- You will still have single density, density and one half, and double density. When you have a Duplicator installed in a 1050. drive that drive will be turned into true double density. You will have twice the disk storage. Your drive will be compatible with other double density drives as The Rana Indus. Percom, etc.
- High speed read & write. Your disk drive will read and load all of your software, saving wear and tear on your drive. The 1050 drive now reads one sector at a time. This is slow and inefficient. With the Duplicator installed you will read eighteen sectors in the time it takes standard, unenhanced drives to read one
- User friendly disk software will be included with every Duplicator. A simple, menu driven program will allow you to copy all of your software, it will back-up many new programs never before possible. Example: Goonies and Never Ending Story by Datasoft™ (weak sector), Hardball by Accolade™, **Apshi Trilogy by Epyx™ (Fuzzy Track 39).** Yes, the Duplicator is now backing-up disks protected by the WEAK and FUZZY sectors and the copies will run on any drive and computer.

Dealer inquiries are welcome, call for quantity price quote

EASY 5-MINUTE INSTALLATION Fully Compatible with XL and New XE Series.

THE HACKER'S TREASURE CHEST ON DISK

18 Utility Programs on disk. Each program is specifically designed to aid you in backing-up your software collection. You will be able to duplicate disks, cartridges and cassettes. Any one program is worth the price of all 18. It has taken us over one year to put together this fine collection on the Hacker's Treasure Chest disk. Some of the programs you will receive are: Cartridge Copy, Bootape Maker, Tape to Disk, Sector Copy, The Unprotector, Sector Disassembler, Bad Sector Finder, Modem Program... plus more. All of these programs plus 10 more on this disk. You will also receive a menu that will run basic and binary files just by typing the number of the program. Any file on any disk will load automatically from this menu. ALL FOR ONLY

DENSITY "DOUBLER" 1050 DOUBLE THE POWER... TRIPLE THE SPEED...

Dr. T's MUSIC SOFTWARE

THE MOST POWERFUL MIDI MUSIC SOFTWARE IS NOW AVAILABLE FOR THE MOST POWERFUL HOME COMPUTER!

Dr. T's Music Software is currently developing a complete line of MIDI music software taking FULL advantage of the power and features of the ATARI 520/1040ST computers.

NOW AVAILABLE...

KEYBOARD CONTROLLED SEQUENCER

\$195

Full MIDI parameter/note editing, cut and paste editing, 48 tracks, 126 sequences, 40,000+ notes 520ST, 130,000+ notes 1040ST, MIDI song pointer, and MUCH MORE!

MIDI RECORDING STUDIO

\$39

6-Tracks, full cut and paste editing, data compatible with Keyboard Controlled Sequencer, and MORE! Full credit on trade-up to KCS.

CZ PATCH

899

Graphic display of envelopes, full edit/librarian features, point and click, 240 sounds on the disk!

COMING SOON ...

A full line of sound editors, music score printing/editing utilities, algorithmic composition tools, and more! Call or write for details.

LIMITED ONLY BY YOUR IMAGINATION . . .

Dr. T's MUSIC SOFTWARE, 66 Louise Rd., Chestnut Hill, MA 02167 (617) 244-6954

Response Surface Mapping

New views for 3-D graphics

Z = SQR(X * X + Y * Y)

Turn complicated math functions into easy-to-read graphs that double as moire art. This BASIC program runs on all 8-bit Atari computers, with disk or cassette. An 80-column printer is required.

BY JAMES PIERSON-PERRY

ne of the more useful ways to study mathematical relationships is through graphics. Plotting a function usually gives a greater intuitive grasp of how the variables interact with each other. For example, a drawing of a sphere is much easier to comprehend than the function Z = SQR(R*R-X*X-Y*Y).

Response surface mapping is another way of representing 3-D functions and is widely used for scientific applications. These maps are also called "contour plots" because they resemble the contour lines on topographic land maps. RSMAP generates response surface maps for BASIC functions having one or two variables (X and Y). Analytical uses aside, many such graphs are interesting simply for their visual appeal.

In view of this, it is not surprising that 3-D graphics plotting is a popular software application. Examples of these include Paul Chabot's *GRAPH 3-D* (Antic, October 1985) for 8-bit Ataris, and Tom Hudson's *CAD 3-D* for the ST (\$49.95. The Catalog, ST0214). Programs like these let you

continued on next page

create, manipulate and print 3-D images of functions.

Response surface maps use colors or symbols to represent the Z (response) value, rather than plotting the third dimension in perspective. A weather map is a good example of a response surface map. Here, one type of symbol represents low pressure areas, while another symbol represents high pressure areas.

BACKGROUND

Most 3-D plotting programs give the illusion of three dimensions on a flat surface. The resulting image is greatly dependent on the viewing angle and may hide important parts of the function. Response surface mapping programs always look "down" at the function, along the Z-axis. This gives the entire X,Y grid as the viewing field.

The computer evaluates the function at each point on the grid and prints a letter corresponding to the resulting response value. We can extend this technique to examine functions having more than two variables. For example, consider the function Z = X * X + Y * Y + W * W. We can make a separate map at various fixed values of W (called "slices") which, when viewed in sequence, give a good picture of what the overall function looks

THE PROGRAM

Type in Listing 1, RSMAP.BAS, check it with TYPO II and SAVE a copy before RUNning it.

When RUN, RSMAP displays a title screen, then pauses and waits for you to type in your function. All standard BASIC arithmetic operators and transcendental functions are allowed. Constants such as PI and E also may be used. You may define any of your own constants in line 1270. (NOTE: Embedded logic operators for discontinuous functions are not allowed.)

Here are some sample functions: Z = X * X + Y * Y * PI

Z = LOG(ABS(X)) + LOG(ABS(Y))/EZ = ABS(COS(X) + COS(Y))

If BASIC detects any errors, you'll be asked to re-enter the function.

Next, enter the boundaries for the X and Y axes (even if only one variable is used) and the response limits. Estimates of the response minimum and maximum values are automatically generated to guide you in selecting the response limits. These limits will determine the resolution of the

Your Atari will now print the response map, along with a key to the response symbols. A typical map takes from two to five minutes to print. Press the [OPTION] key to abort the printout and enter new parameters.

Here are some additional interesting functions to get you started:

- 1. Z = LOG(ABS(X)) + LOG(ABS(Y))X,Y Ranges = -3 to 3 Z Range = -6.5 to 2.5
- 2. Z = SOR(5-X * X-Y * Y)X,Y Ranges = -1.5 to 1.5
 - Z Range = 0 to 2.5
- 3. Z = COS(X) + COS(Y)X,Y Range = -3.14 to 3.14
 - Z Range = -180 to 180

PROGRAM TAKE-APART

The heart of the map processing is the short subroutine located at the very start of the program to speed execution time.

Lines 1090-1190: Subroutine to evaluate the function over the X.Y grid and translate response values into map symbols. The symbols are stored

```

```
Z = COS(X) + COS(Y)
```

Z = LOG(ABS(X)) + LOG(ABS(Y))

in a buffer (B\$) and printed one line at a time.

Lines 1240-1290: Initialize variables and strings. Current color register values are saved and restored at the end of the program.

Lines 1630-1800: Entry of the plotting function. We use the Atari's "forced-read" mode to install the function into the program.

Analytical uses aside, many such graphs are interesting simply for their visual appeal.

Lines 1830-1890: Input X,Y boundaries and ensure the minimum value is less than the maximum value.

Lines 1910-2030: Routine to estimate minimum and maximum values of Z. A TRAP here prevents errors from illegal BASIC math operation, such as LOG(0).

Lines 2260-2410: Generate the response surface map.

Lines 2430-2510: Allow you to generate a new map using the same function but different ploting parameters.

NEXT STEP

Ambitious readers may want to modify this program to plot functions on a graphics screen instead of a printer. **Antic** would be glad to see a short, elegant enhancement which would support Graphics 15 (ANTIC Mode E), Graphics 7 or any of the GTIA modes.

James Pierson-Perry of Elkton, Maryland is a research chemist with DuPont. His Molecular Weight Calculator program appeared in Antic, May 1986. Pierson-Perry was introduced to Atari computers in 1982 when his daughter's school began using them.

Two New Atari Printers

Good deal at \$219.95

tari's longawaited XMM801 and

SMM804 dotmatrix printers are solidly in the tradition of previous printers. They offer many (but not all) of the features currently considered standard in the marketplace. And they are priced attractively less than the competition—available as low as \$199.97 as we go to press.

In most respects, both new

printers are identical. The XMM801 has a serial interface that plugs directly into 8-bit Atari computers or their disk drives. The SMM804 has a faster parallel interface and is intended for direct hookup to STs. But it can be connected to 8-bit models via the Atari 850 Interface Module or ICD's new P:R: Connection. In fact, if you already own an interface and are considering buying an ST, the SMM804 will give you more speed and features than the identically-priced XMM801.

The XMM801 is compatible with Epson's medium-resolution graphics mode, 960 dots per line. The SMM804 supports as many as 1,280 dots per line. Both were designed to be as Epson-compatible as possible, but

Left: a digitized Churchill printed by Atari's new XMM801 (above). Opposite from top: the ST hi-res bee printed by the SMM804. Atari Planetarium world map printed by the XMM801. Text sample from SMM804.

they are also fully compatible with the old Atari 825 printer and were primarily designed primarily as a new, improved 825.

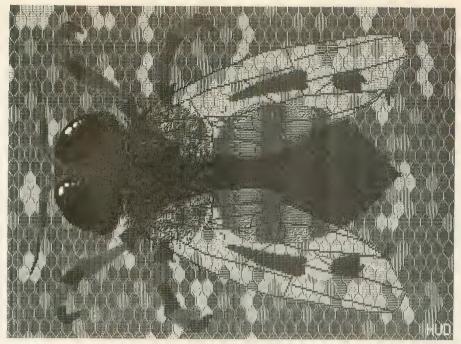

The printers are easy to set up and operate, and they both have quick self-test routines. Paper is easy to load and, unlike other printers, the XMM801 and SMM804 don't waste a sheet of paper while setting up to start printing at the top of the next page.

Detailed, readable documentation is provided for each printer. The XMM801 has a 73-page manual while the SMM804 covers 117 pages. This size difference is mostly due to 25 pages of multi-national control code tables for the ST printer.

Both printers use the same type of

ribbon cartridge, and it's easy to change—just pull straight up and out, and snap in a new one. Atari's own ribbons should be available from dealers who sell the printers, or directly by mail from Atari at approximately \$12.95 each.

However, when Antic checked for additional ribbon sources, we discovered that the XMM/SMM ribbon is compatible with easily-found ribbons used by the Commodore 1526 and the Mannesman-Tally Spirit 80. The sample printouts accompanying this article were made on a Pelikan P-116 ribbon we purchased for \$8.95. The P-116 was a bit tricky to load properly, but it seemed to print darker and more evenly than the Atari ribbons.

GRAPHICS COMPATIBILITY

Text printouts look virtually the same on both printers, except that the 8-bit model does not produce italics. Neither model has a near-letter-quality mode, but their regular text printing is not bad at all.

Both printers are capable of producing detailed graphics, under standard Epson printer drivers. However, software compatibility varies widely. Here are our first results:

On the XMM801, our Atari Planetarium world map and star chart printouts were every bit as good as those from our Star Micronics SG-10. The XMM801 did a respectable job on a digitized photo of Winston Churchill. However, we could *not* get the XMM801 to work with Lister Plus from the The Catalog—or with Broderbund's Print Shop. (According to Broderbund Software, Print Shop has never worked with Atari printers, but they had not yet tested the XMM801 as we went to press.)

The SMM804 generally did justice to the graphics capabilities of ST computers. In a sort of "blind taste test," everyone we questioned at **Antic** preferred the SMM804 rendering of "Stoneage," Darrel Anderson's DEGAS Art Competition winner (**Antic**, July 1986) over that from our in-house Ep-

son FX-85. The SMM804 also turned out accurate dumps of game screens from Epyx's Winter Games and Rogue and Activision's Hacker II.

On the other hand, Tom Hudson's well-known ST Bee screen showed more black-and-white detail on the Epson printout. And in ST desktop screen dumps, white lines were slightly more noticeable on the Atari printouts than on the Epson copies.

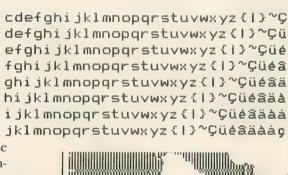

Two other Activision ST screen dumps gave different results. When printing a fill pattern from Audio Light's Paintworks, our results were accurate but inconsistent in density. When we tried to print a musical staff from Music Studio, the SMM804 added an extra line-feed after each line. However, Activision said that a fix for Music Studio was in the works. PCBoard Designer from Abacus Software also gave extra line feeds.

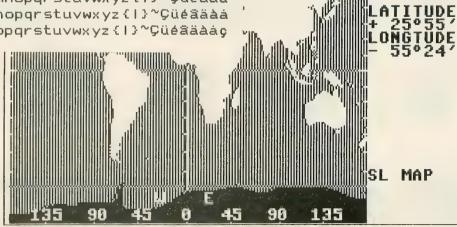

SPEED TEST

Both printers are bi-directional, but neither is incredibly fast. On an 800XL with an 850 interface, we compared the print speeds of six printers: the Atari XMM801 and SMM804, Epson FX-85, the Star SG-10 and new NL-10 and the Axiom (Seikosha) GP-550AT. The XMM801 and Seikosha both had serial hookups, while the other four used parallel connections.

We printed a 20,000-character continued on next page

TIMEZONE

Your Ticket To The Best In Sports

When was the last time you had the chance to attend a championship sporting event-or better yet, play in one? Gamestar's series of outstanding sports simulations gives you that chance. Make the playoffs. Play in the final round at Pebble Beach. Fight the heavyweight champ for the title.

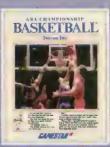

Every Gamestar simulation is as real as the sport itself, from gameplay to strategy to graphics. So winning the championship won't be easy. If it was, it wouldn't be worth it.

For the very best in sports-the excitement, the challenge, even the championship-Gamestar is your ticket.

NUCLEAR WASTE

continued from page 35

may be dropped onto another Type 1 container as long as it bounces to a different location and does not come to rest in contact with Type 1 waste.

Also, you can only hold a can for a short time (depending on which speed you selected). When you are handed a can, a timer in the upper right-hand corner of the screen counts down. When it reaches zero, a buzzer sounds and you must drop the waste in your tracks. Needless to say, this could be disastrous.

You get 10 points for every container successfully dumped. If you manage to fill the pit by placing just

one container of waste as high as the pit's rim, you get a 1,000-point bonus, some neat special effects and an early retirement. If only it were that easy...

DESIGNER'S NOTES

Surviving Uncle Henry's Nuclear Waste Dump does not depend solely on your reflexes, but also on quick, logical decisions. Speed 1 allows quite a bit of time to decide where to drop the waste, while Speed 5 only gives you a split second. Plan ahead, because each move may drastically affect subsequent moves.

The game may seem simple at first, but as the pit fills up, you must consider the physics of how each container will react when it hits the pile, which makes things extremely tricky. Only by playing can you learn. But here's a tip: if a container has the choice of falling left or right, it will always go left. And as you play, you will be treated periodically to words of wisdom from Uncle Henry himself.

Now get back to work. Uncle Henry is counting on you. Good help is hard to find.

James Hague lives in Richardson, Texas and bas worked in assembly language and BASIC for four years. His game Rockslide, appeared in the May, 1986 issue of Antic.

Listing on page 114 🔼

ATARI PRINTERS

continued from page 51

document created with a simple BASIC program that read a text file character by character and copied it to another file (substituting periods for special characters). Then we had DOS 2.5 copy the file from the disk to each printer in turn.

Printer	Time C	haracters Per
	S	econd (cps)
Epson FX-85	3:06	108
Star SG-10	3:45	89
Star NL-10	3:45	89
Atari SMM804	5:28	61
Atari XMM801	6:32	51
GP-550AT	9:41	34

(60 words per minute is about 5 cps.)

The speed differences in our ST graphics tests were even more dramatic. The Epson printed the Bee in two minutes, 28 seconds and the SMM801 took five minutes. 30 seconds (2.2 times as long). But the GEM desktop, which the Epson zipped through in 42 seconds, took the Atari four minutes, 55 secondsseven times as long.

Also, both Atari printers are fairly loud. On a scale of 1-to-10, with 10 the loudest, the XMM801 and SMM804 would be closer to the GP-550AT (about 9) than to the Star SG-10 (about 2).

You'll get quality printouts from Atari's two new 9-pin dot-matrix units. The \$219.95 suggested retail price is their most attractive feature. You won't get all the features, speed, quietness and software compatibility that you'll find in the market leaders, but you'll definitely get your money's

BY DAVID PLOTKIN, ANTIC CONTRIBUTING EDITOR

New Owners Column

Lesson 9: Subscripted Variables

This series, which started in the March, 1986 Antic, teaches beginners how to program in BASIC on all Atari 8-bit computers such as the 800XL and the 130XE. Contributing Editor David Plotkin is a chemical engineer and longtime Atari programmer.

ubscripted variables are very useful for storing and manipulat-

ing information. As you gain more programming experience, you'll learn that sometimes it can be limiting to hold values in standard variables (as explained in **Antic**, May 1986, page 107). Each variable must have a unique name, which must be kept track of. Also, Atari BASIC limits you to 128 different variables. Normally this is enough, but it's possible to run out.

An example of this might be a starship simulation program. Imagine that your universe is broken up into 120 sectors, 10 across and 12 down. Keeping track of all 120 sectors, each with a different variable name, would be cumbersome. Such situations cry out for subscripted variables, which make your job much easier.

Subscripted variables can hold a whole series of values at the same time because of their subscripts, which provide an index to each value. Each **element** of the subscripted variable has a different subscript and can hold a different value. An example of a subscripted variable is: EXAMPLE(2)=3.5, where

EXAMPLE is the name of the variable, 2 is the subscript, and the value 3.5 is the second element of EXAMPLE.

Subscripted variables are given names just like regular variables. However, they are different from regular variables in two important ways. First, you must tell your Atari how much room to save for the values in each set of subscripted variables. This is done with the **DIM** statement.

PLACING VALUES IN STANDARD VARIABLES IS LIMITED. SUBSCRIPTS PICK UP THE SLACK

Second, values stored in the subscripted variable are accessed by use of the appropriate subscript.

DIM STATEMENT

After you decide on a name for a subscripted variable, you must allocate memory to hold its values. The DIM statement DIMensions the sub-

scripted variable. For example, if the variable UNIVERSE is to hold 100 values, then you would use the following:

10 DIM UNIVERSE(100)

You can DIMension more than one subscripted variable on each line:

10 DIM UNIVERSE(100), STAR(50), HIT(10)

Subscripted variables may also have two subscripts, in which case the DIM statement might look like this:

20 DIM DOUBLE(20,20), DOUBLE2(10,20)

Note that you can DIM more than one doubly-subscripted variable on a line, just as with singly-subscripted variables. You may also DIM both singly-subscripted and doubly-subscripted variables in the same DIM statement. You may *not* use variables with more than two subscripts. And it is important to know that DIMensioning a subscripted variable more than once in a program generates an error.

SINGLE SUBSCRIPTS

Singly-subscripted variables have one subscript that must be an integer, and each element can hold a different value:

10 DIM EXAMPLE(10)

20 FOR J = 0 TO 10:EXAMPLE(1) = J*2.2

30 PRINT "EXAMPLE(";J;")=";EXAMPLE(J)

40 NEXT J

Thus, the subscripted variable EXAMPLE can hold 11 different values, one for each value of the integer subscript which was DIMensioned to 10. Although the subscript must be an integer, the value held by EXAMPLE(J) can be any number, including a calculated number. You can also simply assign a value to a subscripted variable:

50 EXAMPLE(0) = 100.345

Another oddity about subscripted variables is that the subscripts start from *zero*. Thus, for example, when you DIMension a variable subscript for 10, you will actually have space for 11 values.

Singly-subscripted variables have many uses. This month's program Listing 1 demonstrates how they can be used to record test scores for a full classroom of students. Subscripted variables are quite commonly used with READ/DATA statements. Notice that you *cannot* READ the value contained in the DATA statement directly into the subscripted variable. The following will *not* work:

10 READ SCORE(J)

Instead, you must READ the value into a regular variable, then transfer it into the subscripted variable:

10 DIM SCORE(1)

20 READ SCORE:SCORE(0)=SCORE

The above is perfectly valid, because your Atari sees SCORE and the subscripted variable SCORF(J) as two *dif*-

A SUBSCRIPT CAN HOLD OVER 5,000 VALUES— A STANDARD VARIABLE, ONLY ONE

ferent variables: The same principle applies when you use INPUT and GET to obtain a value for a subscripted variable—you must INPUT or GET a regular variable, then equate the subscripted variable to the regular variable:

10 DIM SCORE(1)

20 PRINT "What Score";:INPUT SCORE

30 SCORE(0) = SCORE

DOUBLE-SUBSCRIPT ARRAYS

Each subscript of a doubly-subscripted variable must be DIMensioned:

10 DIM UNIVERSE(10,12)

Doubly-subscripted variables are often thought of as being represented by rows and columns. Thus, UNIVERSE would have 10 rows and 12 columns, holding 10×12 , or 120 values. Because of the analogy to rows and columns, doubly-subscripted variables are often referred to as arrays. To access the values held in an array, you must specify *both* subscripts:

10 DIM UNIVERSE(5,6): UNIVERSE(1,4) = 2.1

20 PRINT UNIVERSE(1,4)

Again, the subscripts must be integers. The same rules for singly-subscripted variables apply to arrays.

As you can see, it is now quite easy to solve the problem of keeping track of 120 sectors in your starship simulation. Just DIMension a 10×12 array and store a number into each element of the array. This month's Listing 2 is an example of how you might carry this out. Notice how the nested FOR/NEXT loops are used to access each element of the array UNIVERSE by stepping through the subscripts. Using the RND (random number) function assures that there will be a different number of enemy ships in the sectors each time we play the simulation.

CALCULATED SUBSCRIPTS

I have stated that the subscripts must be integers. In fact, if you do specify a subscript which is not an integer, your Atari will round it to the nearest integer anyway.

You can also calculate a particular subscript by using the mathematical rules explained in **Antic's** July, 1986 New Owners Column. This option gives you considerable flexibility. For example, while you are limited to having two subscripts in an array, you can represent three-dimensional space with a singly-subscripted variable by doing some calculations on the chosen 3-D coordinates:

10 DIM SPACE(1000)

20 FOR J = 0 TO 999:SPACE(J)=RND(0):REM PUT SOME VALUES IN SPACE

continued on next page

December 1986 55

30 PRINT "INPUT X,Y,Z COORDINATES (0-9)":INPUT X,Y,Z

40 IF (X<0 OR X>9 OR Y<0 OR Y>9 OR Z<0 OR Z>9)
THEN PRINT "COORDINATE OUT OF RANGE!":
GOTO 30

50 PRINT "VALUE IS "; SPACE(X+Y*10+Z*100): REM CALC. THE SUBSCRIPT.

60 GOTO 30:REM AROUND AGAIN

Both singly-subscripted and doubly-subscripted variables can be used like regular variables in mathematical equations and in GOTO/GOSUB statements. In fact, subscripted variables can be used just about anywhere that regular variables are used—except, as stated above, in READ, INPUT, and GET statements.

FRACTAL LISTING

Listing 3 makes extensive use of arrays to store values for later use. The program generates a shape on your screen which looks like a different 3-D landscape every time. The program uses a form of fractal arithmetic, which generates shapes that imitate nature. Memory requirements for Listing 3 are 32K disk and 24K cassette.

When the program starts, it will ask you how many levels you want. The higher the number of levels, the finer the resolution of the picture and the more lifelike the result. But the higher-numbered levels also take longer to draw on the screen. Level 6, the highest resolution, takes several hours, so be sure you want your computer tied up that long.

BASIC COMPILER For Atari 520/1040 ST

- So easy to use!
- A menu driven GEM application!
- Fully ST BASIC compatible!
- Produces small efficient code!
- Generates a stand alone program!
- Supports GEMSYS and VDISYS calls!
- Has hooks to BIOS!
- No line numbers needed
- Double-precision floating point numbers fully implemented

For the BEST professional BASIC Compiler on the market today send.

X-10 POWERHOUSE A new dimension in home safety, energy savings and security A new dimension in home safety, energy savings and security

Now you can finally use your ATARI home computer to conveniently create, store and recall programs that can be loaded into the X-10 POWERHOUSE to control lights, appliances and other devices hooked up to X-10 Control modules throughout your home. The X-10 POWERHOUSE control system provides a new dimension in home security, safety and energy savings.

Each interface kit includes an X-10 POWERHOUSE, a special ATARI interface adaptor and the Building Manager software disk.

Suggested List \$119.95 VISA/MC/COD Add \$3.50 for shipping.

Works with all 8 bit Atari home computers with at least 48K of RAM.

Building Manager is a trademark of Terrific Peripherals. Atari is a registered trademark of Atari Corp. X-10 and Powerhouse are registered trademarks of X-10 Corporation.

Spellblast

Space-action spelling action

Spellblast combines rapidfire arcade action with the
time-bonored Hangman
format to bring children a
fun way to to learn spelling. The BASIC program
works on all 8-bit Atari
computers with a minimum of 24K memory,
with disk or cassette.

any children automatically seem to dislike things that are supposed to be good for them. Well, just leave out the word "educational" when you introduce your children to Spellblast, a

space-action version of Hangman. The kids will soon be spelling better than ever, and they'll be having too much fun to realize that Spellblast is supposed to be "good for them."

The game can also be easily customized to help children—and adults—practice spelling the exact words they need more work on.

PLAYING SPELLBLAST

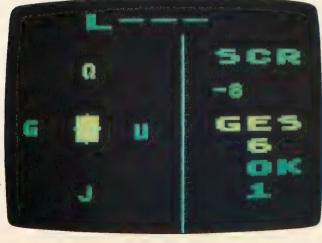

After the title page is displayed, pressing the joystick button calls up the instruction screen. Press the joystick button a second time to arrive at the topics menu. Move the joystick left and right to choose the total words to be spelled per game. The default value is 10, with a maximum of 50. Move the stick up and down to pick one of the desired topics from the display. Press the joystick button to begin game play. This published listing has three topics for spelling practice:

- 1. Animals, Fish & Fowl
- 2. Musical Instruments
- 3. Computer Terminology

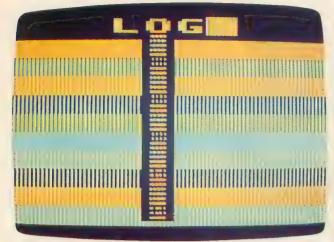

A series of blanks for letters appears across the top of the screen. On the right is a display of the current score (SCR), total guesses for a given word (GES) and the number of correctly chosen letters in the word (OK). On the left is the play area, where your "spellbase" appears in the center of a wave of attacking letters.

Four letters approach your base from above, below, left and right. At least one of these letters *might* fill a blank. Just point the joystick handle

continued on next page

In this fast-action spelling game, zap the correct letter before it reaches the starbase at the bottom of your screen.

Guess the whole word by pressing the [SPACEBAR]. Typing a correct letter zooms it into the correct space and gives you 10 points.

toward your guess—don't press the trigger button. If you guessed right, the letter you blasted will fill each blank where it belongs in the word. Each correct letter scores two points, but a wrong guess deducts two points. If you think that none of the four letters in a turn are correct, press the joystick button to pass without a wrong-guess penalty. Holding down the joystick button also lets you pause the action and think a bit, before the next quartet of letters descends upon you.

As soon as you think you know the whole word, press the [SPACE BAR]. A large flashing cursor appears at the first blank space remaining in the word. Typing a correct letter zaps it into the blank and adds 10 points to your score. An incorrect guess sends you back to the play screen with a new wave of letters.

Correct completion of a word gives you a 10-point bonus. If you allow a wave of letters to reach your spellbase and destroy it, you lose 10 times the number of points earned in the current word—after which the correct spelling is shown. After you spell all the words for the game, the total, high score and best guess ratio are displayed. Press [Q] whenever you want to quit.

TYPING IT IN

Type in Listing 1, SPELLB.BAS, check it with TYPO II and SAVE a copy before you RUN it.

If you have trouble typing the special characters in lines 5000-5068, don't bother typing them in. Listing 2 will create these lines for you and write them to cassette, or to a disk file called SLINE.LST. Now type NEW and LOAD Listing 1, then ENTER the file created by Listing 2. Make sure you SAVE a copy of the combined program before you RUN it.

CUSTOMIZING SPELLBLAST

Adding new topics or words to Spell-blast is easy. First, change the value of TOPICS in line 2820. Next, add an appropriate menu bar to the number of topics available. Follow the example menu in lines 2850-2870, when adding a new menu line. For example, suppose we are going to add European Countries. TOPICS would then have to equal four in line 2820. We would then add a line to the menu as follows:

2880 POSITION 6,8:?
"4. EUROPEAN COUNTRIES"

Once these steps are complete, just add DATA to the program. There must be five words per line, but if you're a few words short, just repeat some of those already listed in the topic. The beginning line number and the total number of lines in the new topic,

BACKUP PROTECTED SOFTWARE FAST.

From the team who brought you COPY II PLUS (Apple), COPY II PC (IBM) and COPY II MAC (Macintosh) comes a revolutionary new copy program for the Atari 520 and 1040 ST computers.

- Copies many protected programs automatically. (We update COPY II ST regularly to handle new protections; you as a registered owner may update at any time for \$15 plus \$3 s/h.)
- Supports single and double sided drives.
- Includes both a fast sector-based copier and a true bit copy mode for protected disks.

Requires an Atari 520 or 1040 ST computer with one or two drives.

Call 503/244-5782, M—F, 8—5:30 (West Coast time) with your in hand. Or send a check for \$39.95 U.S. plus \$3 s/h, \$8 overseas.

\$39.95

Central Point Software, Inc. 9700 S.W. Capitol Hwy. #100 Portland, OR 97219

Central Point Software

Backup utilities also available for the IBM, Apple II, Macintosh and Commodore 64.

This product is provided for the purpose of enabling you to make archival copies only.

must also be added following the data in line 20000. In our example, you could add line 20010 as follows:

20010 DATA 10040,5

You would then be able to select from four topics for the game.

You are limited only by the size of the screen for topics, which will allow 17 with the current display layout. The words are limited in length to 10 characters. Any more than this causes wrap-around and confuses the display (but does not crash the program).

Memory limitations can be remedied by keeping each topic in separate text files on disk or cassette. Spell-blast could then be modified to ENTER new DATA lines in place of the old ones, along with a new set of topics.

PROGRAM TAKE-APART

200-290: Select a wave of four letters for the game-play loop.

300-595: Draw a wave of characters, get joystick input and set flags.

600-650: Clear the game-play area of the screen.

1000-1430: Display the game title screen.

1500-1610: Select a new word at random from the current topic.

1620-1740: Letters-hit-spellbase routine. Deduct points and continue with a new word.

1750-2020: Spell out the word from keyboard input.

2030-2230: Process selected letter from joystick input and see if word is complete.

2300-2780: End-of-game routine. Print out totals and wait for keypress.

10000-10037: Word DATA for three topics (exactly five words per line.)

20000: DATA indicating beginning line number and total lines of word DATA under each topic.

In May, 1986 Matthew Ratcliff of St. Louis, Missouri won the Antic Award for Outstanding Contributor to this magazine. Listing on page 107

THE ATARI
TEN COMMANDMENTS

[[]

"We shall create a computer that is as smart as the people who buy it." Jack Corp.

The real genius of the ATARI $1040ST^{\text{TM}}$ is that the level of performance you want is already built in.

Our competitors, however, think they can sell you a computer with a puny memory, and then charge you a small fortune to expand it.

We don't think that makes much sense.

That's why the 1040ST offers you 1024 Kbytes of memory built in for the incredibly low price of just \$999. That's less than \$1 per Kilobyte.

About the only thing the competition offers is the

chance to spend big bucks to upgrade their systems to where the ST^{TM} started in the first place.

We're pretty sure which computer smart shoppers will buy.

The ATARI 1040ST is at your computer retailer now.

Stepper Motor Robot-Controller

Have you ever wanted to use your Atari to move things? Perhaps to roll a robot around, direct a photocell scanner from across a room, or move a manipulator arm? Stepper motors can do it—with the interface board and software described in this article. Note: To complete this project successfully, you must be enough of an electronics hobbyist to read schematic diagrams and solder a circuit board. The BASIC program works on all 8-bit Atari computers of any memory size, with disk or cassette.

tepper motors move the print head and the paper feed on dot matrix printers. They move the head assembly on your disk drive in and out with great precision, accessing different disk tracks. In fact, steppers are very versatile and would be used for even more purposes except that you can't just connect them to a power source and switch them on and off. They must be controlled with sophisticated hardware—such as your Atari computer.

(Antic successfully tested the stepper motor interface board and software provided by the authors. But because we wanted to get this important (and thoroughly detailed) material into print as quickly as possible, we did not take time to rebuild the bookup from scratch, as is our usual procedure when publishing hardware-software projects.—ANTIC ED)

HOW STEPPERS WORK

Stepper motors rotate only a little bit when pulsed, typically 1.8 to 3.75 degrees. But they do it with precise accuracy and powerful torque. These motors move something into position and lock it there firmly. Unlike most other tools for moving things, stepper motors can tell you exactly how far and how fast they have moved, and which way they are pointing.

All electric motors have two basic parts—the armature, which turns, and the stator, which doesn't. Magnetism pushes and pulls the armature with the stator. In a conventional motor, when the armature almost gets to where magnetism is moving it, brushes contact new areas and the magnetic polarity is switched. The armature suddenly has a long way to go again—rather like coaxing a horse forward with a carrot on a stick.

Most conventional motors have only one stator coil, but stepper motors usually have four. Steppers also use a permanent armature magnet instead of armature coils, commutators and brushes. Stepper motors let the armature catch the carrot, and they magnetically lock the armature into each position. Turning on another coil of the stator and turning off the previous coil moves the armature another step and locks it into a new position.

The stepper motor controller rapidly distributes precisely timed bursts of electricity to the different coils of the stepper motor and provides the timing to control the speed. It can also count the number of steps traveled—that is, how far the armature has been turned—with computer-like accuracy. And this is where your Atari comes in. The software and hardware explained in this article will let you use your Atari as a stepper motor controller for many robotics-type projects of your own choosing.

HOOKING UP

An Atari 8-bit computer has excellent Input/Output capabilities that include two joystick ports, each containing four digital I/O pins, two analog (pad-

Step #	Q1	Q2	Q3	Q4

31/2	OFF	ON	OFF	OFF
4	OFF	ON	ON	OFF
41/2	OFF	OFF	ON	OFF
1	ON	OFF	ON	OFF

Figure 1

dle) inputs, a trigger input, a five-volt direct-current source (+5VDC) and a ground. These items meet the needs of most stepper motors. The digital I/O lines can be used in a joystick port to turn the stepper motor coils on and off, while the +5VDC and ground can power the interface circuit. The source of the current to power the motor depends on the stepper motor used.

In our sample interface, we'll use an Airpax 86402, a +12VDC four-phase stepper. This is a good choice because +12V is easy to get and the motor is

SOME SUPPLIERS

Below are three electronics sources where the authors found good deals on key parts for this project. This short list is clearly not meant to be a complete guide to all possible parts suppliers throughout the U.S.

John J. Meshna Jr., Inc. 19 Allerton St. Lynn, MA 01904 (617) 595-2275 Stepper Motor SP-369B31 \$3.50

Jerryco 601 Linden Place Evanston, IL 60202 (312) 475-8440 11.5VDC Power Supply J-3895 \$7.50

H & M Engineering 1945 S. Lincoln St. Springfield, IL 62704 (217) 787-8422 (after 5 p.m.) Stepper Motor Printed Circuit Board \$8.50 strong and precise—only 1.8 degrees per step—but mostly because it's cheap. In fact, we can buy the whole controller and motor with power supply for less than \$25. Steppers are usually fairly expensive, but if you buy from surplus stores the prices get ridiculously low (\$3.95 for the one we used).

To turn the stepper motor, we apply +12V to different phases (combinations) of stator coils in turn. The stepper can be turned in half steps by using another set of combinations. But the half steps don't have the same powerful torque as the full steps and your project will probably not need to use them.

Some stepper motors need different arrangements for coils and phases. These can be obtained from the stepper manufacturer. *Figure 1* shows which coils to send power to for different amounts of clockwise and counter-clockwise rotation, on an Airpax and similar motors.

We will assign one digital I/O pin in the joystick port to each coil, and use that pin to turn the power on and off for that coil. The Atari software will regulate the combination of coils to power during each phase, take care of the timing and keep track of the stepper position.

We must build a circuit to tell the coils when the joystick lines go high or low. We'll use a 2N3055 transistor to turn the power on and off. A 7404 integrated circuit will turn the transistor on and off with the digital line, and costs as little as 15 cents. A diode keeps the motor noise out of the computer, a pull-down resistor keeps false signals away and a power resistor cools the motor.

HIGH-LOW

When the joystick line for a coil goes low, the 7404 sends +5V to the base of the transistor, turning that transistor on and allowing the current from the motor to flow through the transistor to ground, powering that coil. The current goes through a power resistor before reaching ground, however, limiting total current flow.

continued on next page

When the joystick line goes high, the 7404 output and the transistor are turned off, stopping the current flow in that coil. We invert the pin/power relationship because the Atari normally puts all four pins high after a system reset. That would simultaneously power all four phases of the stepper before the program takes over and heat up the motor unnecessarily.

A diode between the 7404 and the transistor allows current to flow from the chip to the transistor, but not vice versa. This prevents motor noise from backing up through the system. The pull-down resistor keeps the transistor off until the computer

supplies a signal. This is repeated once for each coil. The 7404 handles all four digital signals, triggers each transistor, and is powered and grounded by the joystick port.

The power and ground for the stepper motor come from a +12VDC power supply. A power supply from an Atari 5200 video cartridge system is rated at +11.5 VDC, which is close enough. There are ample 5200 power supplies on the surplus market for \$7-\$8 each.

Assembly of the interface board is comparatively easy, but beginning hardware hobbyists should work carefully and use a low-wattage soldering iron. Follow the schematic diagram in *Figure 2* if you are using perforated board, which works fine if you don't want to etch your own board. Or work from *Figure 3* if you are making a printed circuit. Use a socket for the 7404, make sure your solder joints are good and don't short the IC's pins together. Watch out for correct wire connections to the 2N3055.

If you are using the Airpax 86402 stepper motor, connect the two red wires to the positive lead of the power supply. The other four wires are the individual phase wires and should be connected to the board as follows:

Yellow Q1 Orange Q2

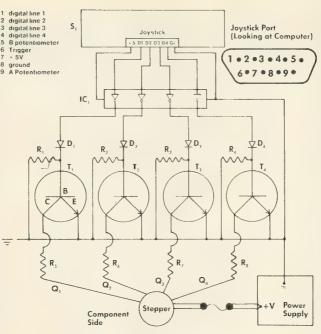

Figure 2

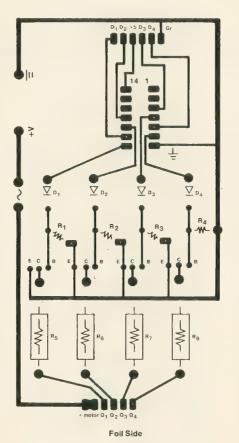

Figure 3

Brown Q3 Black Q4

The stepper motor plugs into the interface board via a polarized con-

nector. Plug the power supply to the board, following the correct polarity. Plug the DB-9 socket into the first joystic port, plug in the power supply and RUN the software.

Our stepper program was written to control various different motors. And different brands of stepper motor have different maximum stepping speeds. When performing a full-speed movement, the program may sequence the steps a little too quickly for your particular model of stepper motor, which would cause erratic movement. If necessary, insert a FOR/NEXT delay loop between steps, to smooth out the motion.

THE PROGRAM

Type in Listing 1, STEPPER.BAS, check it with TYPO II and SAVE a copy before you RUN it.

This program was originally written to raise and lower a camera platform in precise increments. (See adjoining story, *Steppers In Microphotography*). But the modifications to move almost anything else are simple. The program includes routines for quickly moving the motor in either direction, moving it to a given point, keeping track of the stage position, adjusting speeds, signalling when a move is complete and moving from point to point.

Each time a phase is powered, some I/O pins must be turned on and some off. This corresponds to putting ones and zeros into PORTA (location 54018, \$D300). PORTA is the memory location of joystick port 1 when it is being used as a data register. POKE that location with the decimal equivalent of the proper binary number (5 for 0101, 9 for 1001, etc.) to push the four joystick pins high or low. Labeling each phase number with a variable makes it clearer. Then we just POKE PORTA, A: POKE PORTA, B: POKE PORTA,C etc., to turn the motor.

By noting how many times we've POKEd the stepper, we can record its

motion and then turn it to selected positions with precision. Inserting a FOR/NEXT timing loop creates a variable delay to control the speed. POKE PORTA with A,B,C,D,A,B etc. in order, to turn the motor turns in one direction. If you POKE in the reverse order, it turns in the opposite direction. POKE PORTA with A,E,B,F,C,G,D,H,A,E,B etc. to turn it in half steps.

PROGRAM TAKE-APART

The program's REM statements explain various sections. Line 310 sets up joystick port 1 for output. Memory location 54016 (\$D302) is the PORTA control register (PACTL), and these POKEs set up PORTA for output to the joystick port.

I should mention a few other programming tricks used in the display routines. One trick is to DIMension BL\$ in line 270 and PRINT it in line 490 (every time the menu is rewritten). BL\$ is a character string filled with blanks, and here it clears the command line.

Second, although the menu and commands are in Graphics 1, the display settings are in Graphics 0. Lines 110-120 print the display and the initial settings. Note that PRINT #6; prints to the Graphics 1 screen, while PRINT is used to print in the text window.

The statistics are updated by POKEs to TXTROW and TXTCOL (memory locations 656 and 657) throughout the program. These locations hold the row and column, respectively, for the current cursor location in the text window. In line 890, for example, each time the program moves the stage and updates P (the present location variable), the cursor goes to row 2, column 28 where P is PRINTed. You must also PRINT a trailing space to clear the old number.

Finally, the ticking noise in the keyboard speaker as the program moves the stage up and down is produced by POKEs to CONSOL, memory location 53279 (\$D01F). This is the same location used for reading the console keys. By using FOR/NEXT loops and experimentation, you can create a "fifth voice" for your Atari.

Using stepper motors with your

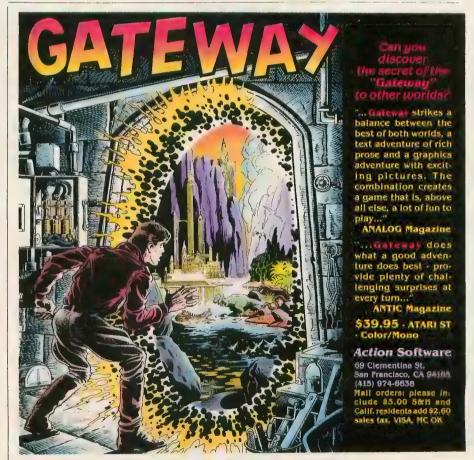

INTERFACE PARTS LIST

Landscape Illusion

Take your Atari on a scrolling 3-D drive through the desert, complete with engine noises. The illusion of three-dimensional depth is surprisingly effective. This BASIC program works on all 8-bit Atari computers with at least 32K disk or 24K cassette.

his colorful optical illusion demonstrates parallax—the way objects appear to move when the viewer changes position. 3-D Landscape Illusion simulates driving through a desert where nearby objects seem to "move" faster than more distant objects. There are also engine sounds to help maintain the illusion.

Type in Listing 1, GOWEST.BAS, check it with TYPO II and SAVE a copy before you RUN it. If you have trouble typing the special characters in lines 210, 1010, 1030, 1100-1150, 1270-1280 and 1330-1350, don't bother typing them in. Listing 2 will create them for you and write them to a file called GWLINES.LST. Once you've created this file, type NEW and LOAD Listing 1. Next, ENTER the file created by Listing 2 to complete the program. Remember to SAVE a copy of the merged program before you RUN it.

When you RUN 3-D Landscape Illusion, it creates a desert scene divided into three independently scrolling horizontal strips. The mountains are drawn in the Landscape Illusion simulates motion by scrolling the foreground and background scenes at different rates.

top strip, which moves slowest. The hills occupy the center strip, which scrolls a little faster than the mountains. The road is the bottom strip and scrolls fastest of all.

The Sun and the car bumper are players and remain stationary. The Player/Missile priority selection register (GPRIOR, memory location 623) is set to 2, allowing the Sun to apparently "slip behind" the taller mountain peaks. This instruction is in line 170.

continued on next page

Scrolling scenery fools the eye

ANTIC MODE 4

The hills, mountains and the road are made of redefined characters, and displayed in ANTIC Mode 4 (Graphics 12 on XL and XE computers). This four-color character mode has the same horizontal resolution and twice the vertical resolution of Graphics 7—but requires less than a third as much memory.

Unlike other character modes, ANTIC Mode 4 characters were not meant to be formed into words and sentences. They're primarily used to generate detailed playfields which use a minimum of memory. To design original

games or other graphics with your own ANTIC 4 characters, you need a special character set editor such as INSTEDIT (\$15.95, The Catalog, AP0117).

Sub, a joystickcontrolled illusion, simultaneously scrolls four horizontal scenery "strips."

DISPLAY LIST BENDER

A Display List is a program which tells the ANTIC chip how to draw the screen. Display lists may only have three types of instructions:

- 1. Where to get the information to display.
- 2. How the information should be displayed (Graphics 0 characters, Graphics 8 bit-mapped graphics, ANTIC Mode 4 characters, etc.)
- 3. Are there any special options (such as vertical or horizontal scrolling, or interrupts) to consider?
- 3-D Landscape Illusion constructs a special display list which extensively uses all three types of instructions. The Graphics 23 call in line 40 establishes a Graphics 7 display list, without a text window.

Routines in lines 120-140 change this display list into the special ANTIC 4 display list which handles all three scrolling strips, plus the background.

A display list interrupt (DLI) at the start of each strip controls its horizontal scrolling, and changes color values at the bottom of the screen. A Vertical Blank Interrupt (VBI) routine controls the DLI's timing, and handles coarse scrolling. These routines are called in lines 210 and 220.

DISK BONUS

This month, Antic Disk owners are treated to a second optical illusion. SUB.EXE is a machine language joystick-controlled scrolling demo for all 8-bit Atari computers. This smoothly detailed, unearthly landscape was programmed by Patrick Bass, Antic's ST Program Editor. To see SUB in action, choose Main Menu selection 1 to get into DOS and then [L]oad SUB.EXE from DOS Menu selection L.

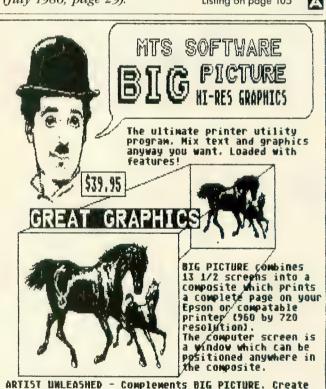

The following books will teach you more about these advanced graphics techniques:

Atari Graphics and Arcade Game Design By Jeffrey Stanton with Dan Pinal 477 pages

Antic 8-Bit

PRACTICAL PROGRAM *** CONTEST ** First Prize Atari 1040ST

Plus \$500 worth of Batteries Included ST software

Computer (Provided by Michtron)

Three Runner-Up Prizes; Antic 1-Year Disk Subscriptions

A lso, any entries (including prizewinners) accepted by Antic Magazine will be paid at our standard authors' rate, upon publication.

HOW TO WIN We are looking for the most powerful, versatile, easy-to-operate programs that perform useful jobs in the real world. The more uses for your software, the better. For example, a stuffed-animal database for taxidermists would probably be considered too specialized by the magazine's judges—no matter how excellently it is programmed.

The winning software must be user-friendly, most likely menu-driven wherever possible. Users should not need programming knowledge in order to successfully operate the application programs.

Please note that some of the other popular Atari program categories—such as utility routines that add power when inserted into your own programs—cannot properly be considered applications. Practical application programs should be complete, stand-alone software that does an entire user-controlled job from start to finish. For example, a drawing or painting program would be a practical application—a colorful graphics demo would not!

TECHNICAL RULES Programs must run on the Atari 800, 800XL and 65XE models and require no

more than 48K memory. However, programs that *also* take advantage of the extra memory in the 130XE will be given preference.

Programs must be written in standard renumberable Atari BASIC or MAC/65 assembly language, under a disk operating system compatible with Atari DOS 2 or 2.5. Program listings cannot be larger than 150 sectors of a single-density disk.

Thorough error-trapping is very important. Your program should not crash every time a user accidentally presses the wrong key. And please do not include authors' copyright statements in your listing.

JUNE 15, 1987 All entries in the Antic 8-Bit Practical Applications Competition must be received by June 15, 1987. Winners will be announced in the November, 1987 issue of Antic. Judges' decisions are final.

Entries—programs and accompanying articles—should be submitted on disk *and* in printout. Entries will be returned only if the author provides a stamped, selfaddressed envelope.

Send entries to:

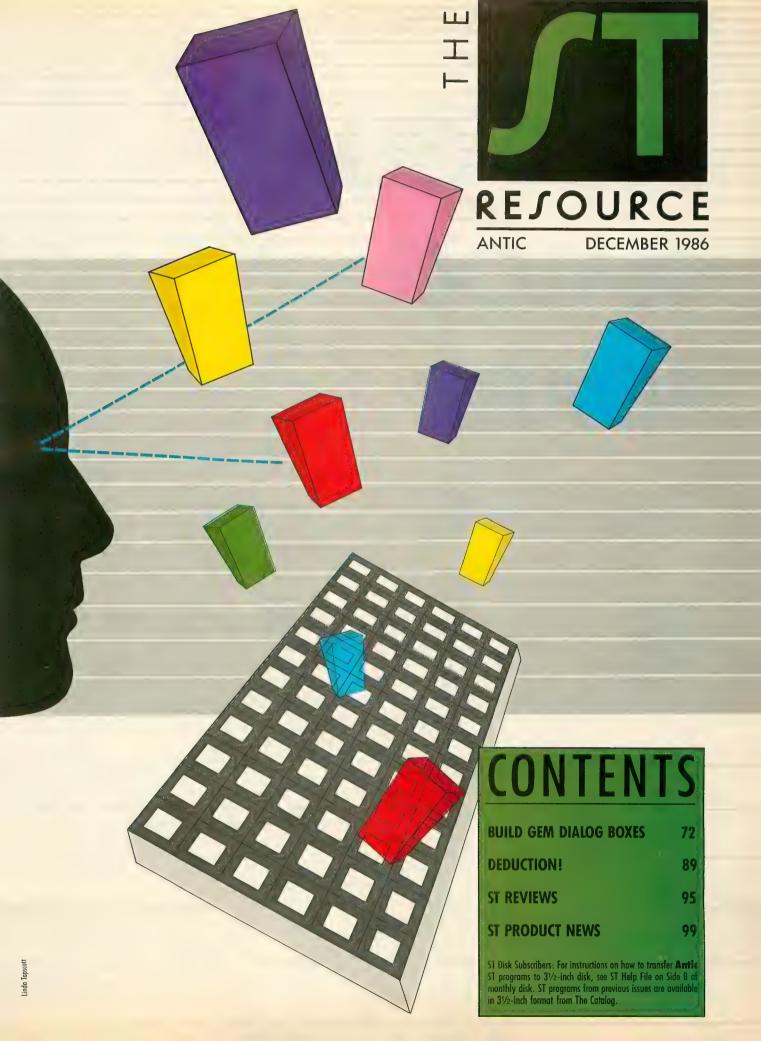

Practical Applications Competition

Antic Magazine

524 Second Street

San Francisco, CA 94107

All 8-bit practical application programs accepted for publication by **Antic** between November 1, 1986 and June 15, 1987 will also be automatically evaluated as potential prizewinners in the contest.

BUILD GEM DIALOG BOXES

Stepper Motor for ST

p to now, the Antic ST Resource has published programs that got necessary user-supplied information either directly from the keyboard or from alert boxes. While alert boxes are fine for small amounts of communication, such as "pick one of three choices," they fall short when more detail is needed. The keyboard allows for more detail, but isn't as friendly the GEM interface standard.

People are comfortable working with paper "forms" they can fill out. In GEM, the equivalant of a paper form is called a dialog box. Unlike an alert box, a dialog box can accept multiple lines of text, or detect when the user clicks on graphic buttons or switches inside the box. Examples of dialog boxes include the File Selector Box and the box that pops up when you "show info" on a disk or file.

This month, we're going to create and manipulate our own dialog box. Although the program is written in DRI's Alcyon C from the Atari ST Developers Kit, the same principles apply for users of other ST languages—such as OSS Personal Pascal, TDI Modula-2 and Prospero Pro Fortran-77.

Since we're using Alcyon C, we'll create it using one of the three Resource Construction Sets (RCS) available. Resources are collections of text strings, rectangle descriptions and pictures which are kept separate from individual programs. Thus anyone can come along later and, for example, change the program's English text into French *without* disturbing the rest of the program.

Two of the RCS programs are from DRI itself. The original RCS was supplied with the Atari ST Developers

Kit, and RCS 2.1 can be downloaded from the CompuServe SIG*Atari Developers Forum. The third is the RCS supplied with MegaMax C. All three RCS programs are compatible with one another. For example, this means you could create a resource file with the DRI RCS and edit the same file with the MegaMax RCS.

Those of you with OSS Personal Pascal can easily create these resource files from within a running program. The C packages, however, make this feature too cumbersome for demonstration here.

WHAT'S INSIDE?

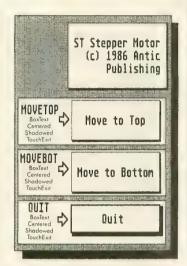

Anybody who programs the ST for awhile finds out that GEM loves rectangles. A GEM dialog box is *always* a rectangle—whether visible or invisible—and holds smaller rectangles inside it, which may in turn contain even smaller rectangles. This is explained as a "parent/child" relationship, where the smaller child rectangle is always completely contained within the larger parent rectangle and may not overlap.

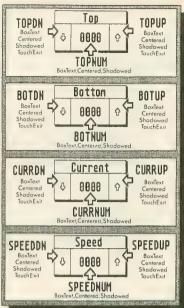

This arrangement of nested rectangles is also known as a "tree of objects". The information structure within each tree allows GEM to track the size, color, location and other specifications of each rectangle. The "root" of the tree points to each of the parent root's children, which themselves point to any children they contain, etc. Visualize this relationship as spreading branches of a tree.

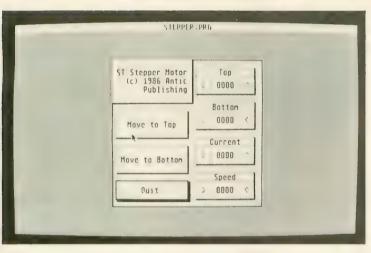

THE OBJECTIVE

For the demonstration program this month, we'll create a dialog box—resembling a control panel—to operate the hardware described in this issue's 8-bit *Stepper Motor Robot-Controller* article. The GEM dialog box performs the same functions as the keyboard-operated program for the 8-bit Ataris. (You'll need to read the 8-bit article to understand the overall stepper motor project.)

Antic Disk owners can LinkLine the program over to their STs right away. LOAD both STEPPER.PRG and STEPPER.RSC to your ST. For the program to fully work, you need to build the

Above: Diagram of ST
Stepper Motor
dialog box
(drawn with
DEGAS)
showing the
GEM names
and attributes. Below:
Completed
anscreen
dialog box.

interface board described in the 8-bit stepper motor story. However, if you just want to study the programming of ST dialog boxes, this program will run only if you have your printer connected and online.

If you don't have this month's Antic Disk, carefully type in Listing 1 STEP-PER.C, and SAVE a copy to disk. Compile and assemble this C source code down into a .o file, and then link it to apstart, with aesbind, vdibind, osbind, and libf trailing along behind. Relmod the resulting .68K file into a .prg file and you're half finished. We now need to create our resource file.

BUILDING A RESOURCE

Figure 1 is a picture (drawn with DEGAS) of the dialog box created for the ST Stepper Motor program. Using your Resource Construction Set to re-

produce the rectangle sizes exactly as shown is not important. The important thing is that you correctly *name* each of the objects and correctly set their individual *attributes*. For example, let's look closely at the four objects at the upper right of the dialog box—these objects combine to form a controller for the way we change and monitor the top location of the camera platform.

There are three smaller boxes below a full-width box that contains the word "Top" inside it. Of the lower three boxes, the center one has a four-digit number in it and the two flanking boxes contain a down and an up arrow. All four object boxes are of type **BoxText**, and are **shadowed** and **centered**. The two arrow objects are also **touchexits**. The main difference between them is their *names*.

The "Top" box has no name, be-

cause it's only there as a title. The up arrow box is named TOPUP, the down arrow is named TOPDN and the number is named TOPNUM. Each object has its own unique number, so we can use these names just like declared constants when we later need to determine which object we are dealing with. When you're finished creating your new resource, save it to disk. The Resource Construction Set will automatically create a .h header file for inclusion with your C program, containing all the names for the parents and children, along with their object numbers.

For example, because the up arrow object is a **touchexit**, when the program runs and we interact with the dialog box we will receive the number of the up arrow object—TOPUP—whenever the user presses the left mouse button while pointing at that object. We can test for the number of the object which caused the exit from the dialog box and act accordingly. In this case, getting the object number TOPUP from the dialog box directs us to increment the TOP number by one.

SAVING A RESOURCE

Finish creating your new dialog box using your RCS and the example in *Figure 1*. Save it to disk using the name STEPPER. When you examine the directory for that disk, you'll find the RCS has created at least three files:

- 1. .RSC file—the resource itself.
- 2. .H file—contains the names and object numbers. This file is for C programs only, but the RCS from Digital Research can also create files compatible with Pascal or Fortran-77.
- 3. .DEF file—tracks how different trees in a single resource are classified. Categories are dialog boxes, menus, free strings, or unknown. This file is only needed when you reopen a resource file for editing. You can edit a resource *without* the .DEF file, but you must reclassify all trees inside the resource file itself. Incidentally, RCS 2.1 creates a .DFN file, which works the same way.

When the resource is created, you can run STEPPER.PRG by just doubleclicking on its icon. The program will

UNLEASH YOUR CREATIVE GENIUS

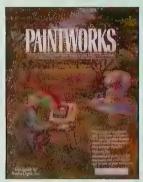

Activision Creativity Software gives you all the tools you'll ever need.

Like The Music Studio. Compose and edit any musical score quickly and easily using features and power unmatched by other music programs. Mozart never had it so good!

Deck the halls! Paper Models™: The Christmas Kit™ turns your computer into Santa's workshop. Three-dimensional decorations including ornaments, gift boxes, and Christmas villages are yours at the touch of a key. Decorate using the clip-art library or customize your own with the paint program.

Picture this. Paintworks, the easy-to-use, complete graphics editor and paint program. Lets you design cards, stationery, newsletters, musical slideshows, or just plain doodle. Features color cycling for animation effects, 3 work screens, multiple brushes and instant color blending to bring out the artist in you.

Have a great idea for a game? With Garry Kitchen's **GameMaker™: The Computer Game Design Kit,™** you can create computer games using 5 professional quality design tools in one easy-to-use program. Or get a head start with pre-designed images and effects. The **GameMaker Designer's Sports Library™** lets you create your favorite sports games from football and baseball to skiing and auto racing, easily and quickly. With the **GameMaker Designer's Science Fiction Library,™** you can create a whole new world, full of spaceships, planets, galaxies, aliens and more. Both libraries for use with Garry Kitchen's GameMaker.

ACTIVISION CREATIVITY SOFTWARE LETS THE CREATIVE GENIUS IN YOU SHINE THROUGH.

For Commodore 64 and 128, Amiga, Apple II series, Atari 800/XE/XL/ST, IBM PC, PCjr, Tandy 1000, Macintosh, and Apple IIGS computers, NOT ALL PROGRAMS AVAILABLE ON ALL SYSTEMS.

search for, and load, the STEP-PER.RSC file, presenting it for interaction. Let's examine the program in detail.

PROGRAM TAKE-APART

This program is written in the original Alcyon C contained in the Developers kit. It is *not* the new Version 4.14. We'll switch when we learn that enough readers have access to Version 4.14. Those of you with MegaMax C should find little problem in converting this program—basically just substitute **sprintf()** for the published program's **ftoa()**. Lattice C and Mark Williams C owners are also encouraged to try.

The top few lines contain remarks for the title and version date. Right below, we **#include** the **stepper.h** file constructed by the RCS and the stock **osbind.h** that everybody knows and loves.

Next come **#defines**, where we redefine some funny C operators into understandable words. The last three lines construct LWGET(x), which functions like an inline PEEK statement for words, and OB_W / OB_H, which will allow us to get the width and height of object rectangles when we update them.

Below the **#define**s are definitions for OBJECT and TEDINFO structures. Structures are a convention in C to relate different sizes of data into an easily accessed form. They are similar to Pascal RECORDS.

Below the structure definitions come the global variable declarations including the 16-bit **ints**, the 8-bit **chars**, and the 32-bit **long**s.

Now we start our program logic. In main(), which every C program must have, we describe the program's operation briefly. Here, we initialize() the application, then move_the_stepper_motor(), and repeat this action while(not finished);. When we finally get finished—when finished sets TRUE—we'll terminate() this application and return to the desktop.

INITIALIZATION

Initialization here hooks our program into GEM and gets our application

"handle." Then it opens a virtual workstation that returns a world of information about the type of terminal we're on, in the array **workout**[].

The first of two new calls, rsrc_load(), when given the path/filename of the needed resource file, will determine how big the resource is, reserve enough memory, and then load the resource into the just-reserved memory section. The second call, rsrc_gaddr(), will return the long address of the memory location holding the root of the desired tree.

From here we can search the tree for any desired object within. Before we leave the initialization function, we set **a**, **b**, **c**, and **d** — which match the function and value of a, b, c, and d in the 8-bit Atari program—to their proper port bit-pattern values. Then we force the mouse pointer sprite back to a pointing arrow, and set **finished** to FALSE, because we haven't finished the program yet.

MOVING THE MOTOR

In move_the_stepper_motor(), we have the major block of code for interacting with our dialog box. The

forms library call: form_center() will figure out the screen position to center the dialog box (based on the size of the dialog) and return them to the variables xdial, ydial, wdial, and hdial. The next call, find_box_sizes(), computes the clipping rectangle needed for each numeric display inside our dialog.

form_dial(0...) saves for later redrawing a copy of the screen portion covered up by the dialog box. form_dial(1...) draws the "growing box" display from size x, y, w, h to size xdial, ydial, wdial, hdial.

We draw our dialog box on the screen with the **objc_draw()** call, which needs to be told the location of the ROOT of the tree to be drawn (box_address), which object to draw (TREE1), how many children deep to draw (2), and the largest clipping rectangle expected, (x, y, w, and hdial).

We now begin interaction with the displayed dialog. The form_do() call needs the ROOT of the tree to interact with, and the number of the editable text field (TEDINFO) on which to place the cursor when the

520ST & 1040ST ARE TRADE MARKS OF ATARI CORP

Your computer can talk in your own voice. Not a synthesizer but a true digitizer that records your natural voice quality—and in any language or accent. Words and phrases can be expanded without limit from disk. Speech Editor program alters or improves sounds.

And it will understand what you say. A real word recognizer for groups of 32 words or phrases with unlimited expansion from disk memory. Speech playback and word recognition can work together. Have a two way conversation with your computer!

Easy for the beginning programmer with new BASIC commands. Machine language programs and memory locations for the more experienced software author.

Exciting Music Bonus lets you hum or whistle to write and perform. Notes literally scroll by as you hum! Your composition can be edited, saved, and printed out. You don't have to know one note from another in order to write and compose!

Based upon new technologies invented by COVOX. One low price buys you the **complete system** Includes a host of sample programs! In addition, you will receive periodic information about speech technology, applications, new products, up-dates, and user contributions. You will never find a better value for your computer.

ONLY \$89.95 includes all hardware and software.

Available from your dealer or by mail. When ordering by mail add \$4.00 shipping and handling (\$10.00 foreign, \$6.00 Canada).

The Voice Master is available for the Commodore 64, 128, Apple IIc, IIe, II+, and Atari 800, 800XL, 130XE. Specify model when ordering. Apple II+ (with 64K) owners must have joystick adapter. Available from Covox at only \$9.95.

Apple Ile and II+ owners: Enhance speech quality and music capabilities with optional Sound Master hardware card. Installs in slot 4 or 5. Available separately for \$39.95 with demo software, or order with Voice Master for only \$119.95 (saves \$10 when ordered together).

DEMO SPEECH DISK AVAILABLE New! An introduction to Covox speech. The \$5 disk gives several general vocabularies that you can use in any of your own programs. Sample programs include a talking keyboard, calculator, clock, and more. English, French and German selections. Samples of level 1 and 2 speech editing. 28 page booklet included. Price is \$5 including postage (\$7 outside North America). Check, money order, or cash only. SPECIFY COMPUTER BRAND.

For telephone demo, additional information, or prompt service for credit card orders (except \$5 talking disk),

Your 520ST with the **EZRAM** Memory Upgrade and **Z-Time** Clock/Calendar

EZRAM[™] 512K Memory Upgrade for the Atari 520ST

Featuring the **EZ**Temp Soldering Guide

Upgrade Your 520ST to a Full Megabyte of RAM

- Increase spreadsheet and database capability.
- Dramatically improve RAM disk capacity for enhanced I/O operations.

Designed for Simple Installation

- Features the **EZ**Temp solder template. All the soldering, only 13 points, occurs on the template not at the RAM chips. Eliminates chip stacking.
- · Clear, easy to follow, illustrated installation instructions.

Free Software

 Memory check diagnostic software and additional accessory programs included.

6 Month Warranty Suggested List: \$199.00

Z-Time Internal Clock/Calendar Upgrade

Z-Time, the chip sized internal clock/calender upgrade for your Atari 520ST. Easy to install. No soldering required. Doesn't use up your cartridge slot. Simply open your 520ST, remove one of the chips on the motherboard and piggy back it on to the **Z-Time** clock/calendar. A ten minute installation gives you time and date every time you boot up with the security of a 10 year lithium battery back-up.

Each **Z-Time** upgrade kit also includes useful system and utility software. Ask for **Z-Time** at your local computer dealer or order directly from Terrific Peripherals.

Suggested List \$49.95

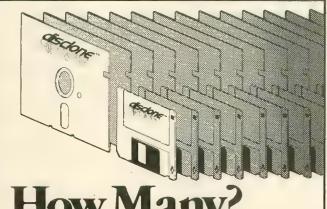

VISA/MC/COD Add \$3.50 for shipping.

17 St. Mary's Court Brookline, MA 02146 (617) 232-2317

Z-Time EZRAM 520 and EZTemp are trademarks of Terrific Peripherals Atari and Atari 520ST are registered trademarks of Atari Corp.

One of the World's Most Popular Games on the Macintosh

Now Available On Atari ST!

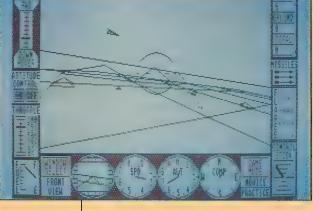

somewhere...the enemy's headquarters.
Your weapon? The Harrier Jump Jet, one of the world's most sophisticated technological marvels, which combines the ability to take

off and land vertically like a helicopter with the speed and punch of the latest in modern jet armament. Your mission, should you decide to accept it, is to pilot your Harrier from the deck of an aircraft carrier, take out enemy aircraft, locate and

destroy enemy headquarters and fuel depot, and safely land back on the deck.

Simple, isn't it? Hardly! Facing you will be some of the

world's nastiest enemy fighter planes launching heat seeking missiles. The good news is that you have three Sidewinder missiles, two 30mm Aden cannon pods and the ability to maneuver like no other jet in history! The bad news? You have only one plane to fight off five enemy aircraft.

Now wipe that sweat off your brow, don your helmet and gloves, strap yourself

into your seat and GOOD LUCK! 'Nuff said, it's CLOB-BERIN' time! Harrier Strike Mission—a 3-Dimensional Flight Combat Simulator for your Atari ST. The first in a series of new projective 3-D simulations from MILES COMPUTING, Inc.

Miles ahead of the back.

Miles Computing, Inc.

CIRCLE 050 ON READER SERVICE CARD

GEM DIALOG

continued from page 75

dialog box is first displayed. We have no editable text in our box, so we pass in a zero. GEM will control and monitor all interaction with the displayed dialog box until the user clicks on one of the designated "exit" objects. GEM then returns the object's number to the program, which in our case gets

MegaMax C users should find little problem in converting this program from Alcyon C

placed into the variable called button.

When GEM passes control back to our program, we use the next 10 lines to test for exactly which object the user clicked on. Using our TOPUP button, the third line would detect when it was pressed for an exit and divert control to the function called **d_topup()**. The **do** loop construct will continue to activate the dialog box until the pressed exit button is the **quit** button.

form_dial(3...) forces a redraw of the screen that was covered by the dialog box. When we fall out of the loop, the next line is form_dial(2...), which draws the "shrinking box" graphic onscreen, to show the utility closing. The screen is redrawn from the image which was saved in the form_dial(0...) call earlier. Now that we want to leave the application, we set finished to TRUE, and return to the outermost loop, which will terminate() and exit.

FIND SIZES

The next function is find_box_sizes(), which uses an AES object library call named objc_offset() to discover the x,y coordinates of the upper left corner of the object you ask it for. In our case, for each number

box we ask for, (TOPNUM, BOTNUM, CURRNUM, or SPEEDNUM), we also get the width and height of the box so we may use the described rectangle as a clipping window. If we did not, then every time we updated each number, GEM would redraw the entire dialog box, at a cost of 1-2 seconds.

UP AND DOWN

The next eight functions are called each time their function button is pressed. For example, **d_topup()** is called whenever the TOPUP button is pressed. The routine **d_topup()** simply increments the variable **top** and then calls **adjust()**, passing in the tree, object, string, and clipping rectangle wanted. All eight routines work the same, except for **d_curup()** and **d_curdn()**, which also have the responsibility of placing the control bytes out the PRINTER port.

ADJUSTABLE

The next function, adjust(), takes the value of the variable passed to it, changes the numeric value into an ASCII text string, then tells the dialog box where to find the just-created string of ASCII digits when it is needed for display.

The function ftoa() changes a numeric value into the ASCII string. MegaMax C users will want to substitute sprintf() for this call. Next, set_text() tells the dialog box where the newly created string is located, and objc_draw() redraws the number box object. Before we leave, beep() sounds a click from the speaker.

Right below is the **set_text()** function, for which I thank ANTIC ONLINE columnist Tim Oren for his help. This function needs the address of the ROOT of the dialog's tree, the number of the OBJECT you desire to change, and the address of the first byte of a null-terminated string of digits to show.

To begin, we declare **obj_ specification** to be a pointer (*) to
a TEDINFO structure. We then assign
a value to this pointer by computing
and retrieving the **ob_spec** value,

which in this case points to the TEDINFO structure itself. Using this pointer to a structure, we assign to the structure entries **te_ptext** and **te_txtlen** the values for the address of the new string and the length of the new string.

The next two functions, move_top() and move_bottom(), describe how to perform timed, programmed moves of the camera stage to the top of available travel, or to the bottom. We set up a for loop to cover the range of travel desired, and then call d_curup() or d_curdn() as desired. Next to last, beep() takes a LO, HI, and loop length value and uses these to perform simple tones through the monitor speaker.

Finally, terminate() does just that; the only difference from every other terminate() call we've published so far is inclusion of a rsrc_free() call, which will disengage and free the memory we reserved for the resource file when we first started the program.

VISA, MC, COD ACCEPTED

MODULA-2

the successor to Pascal

- FULL interface to GEM DOS, AES and VDI
 Smart linker for greatly reduced
- Full Screen Editor linked to compiler locates and identifies all errors.
- True native code implementation
- (Not UCSD p-Code or M-code) Sophisticated multi-pass compile allows forward references and code optimization

- Desktop automates
 Edit/Compile/Link cycle
 FileSystem, RealInOut, LongInOut, InOut, Strings, Storage, Terminal

- Streams, MathLib0 and all standard modules
 Directory search paths
 Supports real numbers and transcendental functions ie sin, cos. tan, arctan, exp. In, log, power, sqrt
- 3d graphics and multi-tasking
- CODE statement for assembly code ■ 370-page manual
- Installs on Hard disk and RAM disk
 No royalties or copy protection
- Phone and network customer support provided

Pascal and Modula-2 source code are nearly identical. Modula-2 should be thought of as an enhanced superset of Pascal. Professor Niklaus Wirth (the creator of Pascal) designed Modula-2 to replace Pascal.

Added features of Modula-2 not found in Pascal

- CASE has an ELSE and may contain Dynamic strings that may be any subranges
- Programs may be broken up into Modules for separate compilation
- Machine level interface Bit-wise operators Direct port and Memory access Absolute addressing Interrupt structure
- Multi-tasking is supported Procedure variables
- Module version control
 Programmer definable scope of
- Open array parameters (VAR r ARRAY OF REALS:)
 Elegant type transfer functions

DEDUCTION

Solve the mystery color patterns

eduction is a classy ST BASIC adaptation of the old game most recently popularized as Master Mind. You must guess a pattern of four colors chosen by the computer. Each color can occur only once in the sequence. The game's concept is ancient, having been played in old England as Cows and Bulls, and more recently as Code-Breaker.

First type in DEDUCT.BAS, checking with ST TYPO,

and SAVE a copy before you RUN it. Load ST BASIC and click on BASIC. PRG. Then load DEDUCT.BAS and click on "Run" in the appropriate window. This calls up a low-resolution color screen that interacts with the user via the mouse. (Sorry, Deduction does not run on the ST's high-resolution monochrome monitor.)

To begin deducing, click on the left button for the easy version of the game, or right button for the hard version. Both versions give you a choice of red, yellow, green, blue,

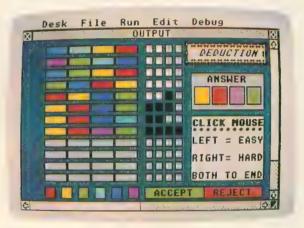

cyan and violet. But the hard version also adds pink. This might not sound like a big difference, but with six colors, the odds are one in 360 that you'll get it right the first time. Adding a seventh color raises the odds to one in 840.

12 TRIES

You get 12 chances to guess the correct sequence. After you click on a color, that color is copied above in the first open rectangle on the left. Click on "Accept"-or "Reject" if you change your mind. The squares to the right of the four rectangles change color to indicate how close your guess was. White squares show that you got a color right, but in the wrong sequence. Black squares indicate that both the color and sequence are right.

From this, you can probably see that those high odds

This pattern was deduced in eight moves. It's not always so easy.

decrease drastically as you play—if you use your head. If you see two white squares, one black and one blank, you know that three colors are correct, but only one is in the right place. From there, you can see how that guess relates to previous guesses. Once you know where a color isn't, you should be able to piece the puzzle together and determine where each color is.

But Deduction isn't a piece of cake. Just guessing randomly won't do. You might even try keeping

track of your deductions on paper to help you see a pattern. But if you just work it all out in your head, you're still likely to guess correctly within 12 turns—if you play the game right.

Deduction follows last month's Hangman in a series of classic public domain games revamped for ST BASIC by Stephen Everman and Paul Pratt of Hayward, California. Their flashy version of Star Trek will appear in the February, 1986 issue of Antic.

ATARI ST

ACTION PAKT

4 Atari ST™ Programs 1 Low Pricel

39.95

DISK LABELER

Custom design your own unique 3.5 inch disk labels.

- Create professional-looking labels using three windows on screen. Fully mouse driven.
- ▶ Up to 38* files on each label, alphabetically, with monochrome monitor. Up to 18 files with color monitor.
- 35 borders and 4 type styles*.
- Includes 50 pin feed disk labels for 3.5 inch disks.
- Uses ST's full graphics capabilities*.

BANNER MAKER

Express yourself! Create original 1 to 4 line banners up to 72 characters in length.

- Includes 5 fonts, Custom design your own with Degas** or use any fonts compatible with Degas**.
- Left, right or center justification.
- Does not require "Action Pak (4 in 1)" * * to print banners. Banner files can be given on disk or sent by modem.

TYPEWRITE

Great for addressing envelopes, filling out forms or writing short memos.

- Turns your ST into a line-at-a-time typewriter.
- Always handy! Resides in RAM as a desk-top accessory or runs as a stand alone program.

SYNFILE** CONVERTER

A real work-saver! Convert your 8-bit Synfile** files fast without having to reenter data.

- Creates ST files compatible with Hippo Simple**, Zoomracks**, DB Master One**, H & D Base**, DB Man**, dbOne**, or Regent Base**.
- Easy to use! Completely self-prompting. Just answer the simple questions.
- ➤ Requires modem or null modem.

Available at your local ST retailer. If you are unable to find it, then send coupon to: Action Software—69 Clementina, Dept. ST, San Francisco, CA 94105. Please include \$3.00 shipping & handling. Calif. residents please add 6.5% sales tax.

Mach 2 for the Atari ST

Mach2: multi-tasking Forth-83 development system

With everything you need to develop stand-alone appplications, including: integrated GEM editor, full GEM and TOS support, Motorola assembler, debugger, demos, and our 300 pg. manual.

Mach 2 is interactive, so it allows you to experiment with the ST without going thru the compile-link-execute cycle. But when you do load in programs, look how we stack up:

Sieve	Compile	Link	Execute
Mach 2	0:00.7	0:00.0	4.41
Megamax C	1:10	0:24	3.83
Hippo C	0:58	1:37	8.4

(That's three times the execution speed of other Forth's) Note the turnaround time. It simply takes less time to develop your programs or finished products with Mach 2.

SF314[™] Microfloppy Disk Drive

Like the 10ST's internal drive, the SF314 is a doublesided, double-density microfloppy disk drive. Add an additional floppy drive to your 1040ST and reap another 720K (formatted) of available disk storage capacity each time you switch on your computer.

No. AA314

\$21900

SF354[™] Microfloppy Disk Drive

Suppose you want a second disk drive but don't need another 720K of disk storage space. Then the SF354 is just for you. It's a single-sided, double-density drive providing up to 360K (formatted) of storage on each 3½-inch disk.

No. AA354

\$17900

SM124[™] High-Resolution Monochrome Monitor

A state-of-the-art monochrome monitor. When you purchase your 520ST or 1040ST systems perhaps you'll choose the color monitor. Well, why not add a high-resolution monochrome display to your system. For word and data processing, there's no clearer, sharper display.

No. AA5124

\$18900

SC1224[™] RGB Color Monitor

A high-performance RGB color monitor. The SC1224 faultlessly displays all 512 of the 1040ST's colors. No doubt its startling display of bit-mapped color graphics will knock your socks off.

No. AA51424

\$Call

The 1040ST from Atari

The first one megabyte computer system for under \$1000.

- Built-in 3½" double sided (720K drive)
- 1 Meg RAM
- 192K RAM w/TOS
- Bundled with Atari RGB monitor
- Includes ST language disk (Basic-Logo-Neochrome)
- Built-in power supply

\$97900

Offering an array of print styles, character pitches, column widths and page-length options, the SMM804 Printer allows you maximum versatility in formatting your written work. Plus—it's uniquely designed to support the 1040ST's print screen utility to transfer hi-res designs and pictures from the computer directly to the printer.

No. AAXM804

\$18900

HARD DISK DRIVE

Connecting this 20MB hard disk drive to your system lets you take advantage of the 1040ST's built-in, high-speed DMA channel (hard disk port). Data transfer (read/write) to and from the drive is virtually instantaneous. Think of it: high-speed data transfers and 20 Mbytes of disk storage—all at an incredibly low cost.

ATARI DISK DRIVE OWNERS . . . HAPPY BLASTS RETAIL PRICE—ORDER TOLL FREE!

THE FAMOUS HAPPY ENHANCEMENT NOW ONLY \$149.95 for 1050 order number HC1A, for 810 order number HC8A

Makes your disk drive read and write faster, and allows you to execute the HAPPY WARP SPEED SOFTWARE. Available only for ATARI 1050 and 810 disk drives. 1050 version allows true double density plus the original single and enhanced density. PRICE INCLUDES WARP SPEED SOFTWARE BELOW, installation required.

HAPPY WARP SPEED SOFTWARE REV 7 (not sold separately)

Includes the famous HAPPY BACKUP and COMPACTOR which are the most powerful disk backup utilities available for your ATARI computer, plus MULTI DRIVE which allows high speed simultaneous reading and writing with up to 4 HAPPY ENHANCED drives, plus SECTOR COPIER which is the fastest disk copier that supports the 130XE RAMDISK, plus the WARP SPEED DOS which improves ATARI DOS 2.0s to allow fastest speed, plus HAPPY'S DIAGNOSTIC which allows comprehensive disk drive testing.

HAPPY 1050 CONTROLLER \$64.95 order number HC2A

For use with HAPPY ENHANCED 1050 disk drives only. Allows easy access to HAPPY 1050 slow and fast speeds and ultimate control of disk drive write protect, including writing to disk back side and protecting valuable data disks. Printed circuit board has switches and write protect indicator LED, installation required.

GET YOUR FAVORITE HIGH SPEED DOUBLE DENSITY DOS

Both of these disk operating systems support the fastest speed with both HAPPY 810* and 1050, and with HAPPY 1050 you get true double density. WARP SPEED DOS XL is HAPPY's own version of OSS DOS XL, and includes under cartridge, under ROM and AXLON RAM disk version, and is order number HC4A at \$29.95. TOP DOS version 1.5 from ECLIPSE SOFTWARE has more menu driven features, operates in all three densities, supports the 130XE RAMDISK, and is order number HC6A at \$39.95. *Note: 810 requires upgrade below.

810 VERSION 7 UPGRADE \$49.95 order number HU3A -XXXX

Allows older 810 HAPPIES to use newer software. Includes custom plug in IC and rev 7 WARP SPEED SOFTWARE. Same price for all HAPPY 810s registered or not. When ordering replace XXXX in part number with the serial number of your HAPPY COMPUTERS manufactured 810 board, or with a 2732 or 2532 which corresponds to the EPROM part number in your HAPPY 810 socket A102 of your side board modified HAPPY (not made by HAPPY COMPUTERS), installation required. Upgrade not needed for new 810 HAPPYS and serial number over 8000.

SUPER PACKAGE SPECIALS

Get a HAPPY 1050 ENHANCEMENT and CONTROLLER and WARP SPEED DOS XL for just \$199.95 order number HS5A, or get the same with TOP DOS 1.5 instead of DOS XL for just \$214.95 order number HS7A. If you already have the 1050 ENHANCEMENT you can get the HAPPY 1050 CONTROLLER and WARP SPEED DOS XL for \$74.95 order number HXL9A, or get the HAPPY 1050 CONTROLLER and TOP DOS 1.5 for just \$84.95 order number HTD9A. For other specials and dealer pricing call (408) 779-3830.

ATARI ST BASIC TRAINING GUIDE

Abacus Software P.O. Box 7219, Dept. A9 Grand Rapids, MI 49510 (616) 241-5510 \$16.95 (\$14.95 optional disk)

CIRCLE 252 ON READER SERVICE CARD

Reviewed by David Plotkin

The Atari ST BASIC Training Guide is a first-class text for ST BASIC users. It is clear, thorough, well-written and remarkably free of errors and typos. It doesn't address some advanced features of ST BASIC, but does a good job on the subjects covered.

The first chapter leads you step by step through the process of creating a program, beginning with fundamentals such as the concepts of programs and algorithms. It continues with flowcharts, documentation, introduction to bits and bytes, and the hexadecimal system.

Successive chapters explain how to use various ST BASIC commands. The sections are short and easy to digest, just right for the beginner. Each chapter includes sample programs which adequately illustrate the concepts being explained. At various points in the chapter there are problems to test your understanding of the material.

(Don't worry, the answers are in back.)

The Guide progresses from easier commands such as arithmetic and random numbers to more advanced commands such as IF/THEN, FOR/NEXT, GOSUB and GOTO. Good sections cover multi-dimensional arrays, disk files, sound and graphics, and using GEM VDI and AES commands for special effects. A good reference section lists the ST BASIC commands alphabetically, along with numerous examples.

This book does not go into great depth about the commands. Details of file structure and use of sequential and random files are not explained, and no mention of the complex WAVE command is made. The concept of partially RESTOREing data is also ignored.

The one serious error I spotted is in the reference section. Under the explanation of the NEW command, it says that the program still remains in memory after the NEW command is invoked. The novice who believes this is in for quite a nasty surprise, because NEW completely erases the program from memory.

I like ST BASIC Training Guide. It does a good job of introducing the user to ST BASIC programming fundamentals. It also provides a valuable reference section for the more advanced user.

ESTE CLOCK CARTRIDGE

BigFoot Systems 2708 E. Lake Street Minneapolis, MN 55406 (612) 722-9515 \$48.50

CIRCLE 257 ON READER SERVICE CARD

Reviewed by Patrick Bass

The eSTe Clock by BigFoot Systems gives the ST a real-time clock with a five-year lithium battery backup. Plug the gray eSTe Clock cartridge into the cartridge port on the left side of your computer and copy the CLK.ACC file onto your start-up disk. The correct time and date will now be displayed on the desktop whenever you boot your ST.

Our eSTe Clock Cartridge came with the correct time and date already programmed in. To actually set the time yourself, a small program called SETCLK.PRG is provided. Double-clicking on this icon allows you to set

the date or time independently of each other. The best part is having all your files correctly time/date-stamped when written. There won't be any more confusion over which file was written last.

The eSTe Clock Cartridge has two built-in EPROM sockets, so you can insert and run your own pre-programmed EPROM chips. (Otto Baade, who runs BigFoot Systems, says he can also supply blank, pre-etched, drilled, and socketed ST cartridge boards which accept and utilize up to four 2732, 2764, or 27128 EPROMS. Price for these boards runs \$15 each in quantities up to 999.)

I like anything that works without me needing to read the directions. The eSTe Clock fills the bill and keeps good time too. When we used it with Flash!—which demands use of the clock while running—the correct time was automatically reset when we returned to the desktop. My only wish-list feature would be a cartridge slot built into the eSTe, so that I could use other cartridges without losing my eSTe Clock.

Sorry, but I somehow feel compelled to write this: It's my personal opinion that the eSTe is the beSTe ST plug-in clock yet.

ACTION PAK

Action Software 69 Clementina Street San Francisco, CA 94105 (415) 974-6638 \$39.95

CIRCLE 256 ON READER SERVICE CARD

Reviewed by Sol Guber

Action Pak consists of four utility programs that make labels for 3 1/2-inch disks, print banners, emulate a typewriter and convert SynFile+ data for the ST.

The menu-driven disk labeler lets you print the directory of the disk in drive A, B or C, using normal, italic or bold print and sorting the files alphabetically. You can rename the disk, change the border around the label, or just print the directory in 80-column format. Included with the

package are 50 disk labels to get you started.

The banner program lets you print banners of up to four lines with as many as 72 characters each or send them to a disk file. For one-line banners the characters are about 64 asterisks high. On four-line banners, the size decreases to 16 asterisks. The disk contains four different fonts. The provided letters are slightly chunky and unattractive. But more fonts can be generated from Batteries Included's DEGAS or loaded from other sources.

The typewriter desktop accessory sends information directly to your printer. Just load the program and start typing. When you press [RE-TURN], that line is sent to the printer as shown, along with a line feed. You can delete characters before they are printed. This program can be used to

Make labels or banners, emulate a typewriter and convert SynFile+ data

address envelopes, fill out forms or write memos from within a program. It can also be used to send special characters to a printer to modify the printing.

The SynFile+ converter lets you make ST conversions of files generated on Atari 8-bit computers with Broderbund's SynFile+ database. The six programs supported are Hippo-Simple, Zoomracks, dBMAN, H&D Base, dbOne and dbMaster. To use the program, either connect your ST to an 8-bit machine via null modem cable, or upload and download the files to and from a bulletin board.

The SynFile converter is easy to use and has many prompts to help you. As it runs it gives information about the file and the record count, and displays a running total of the records processed. Once the records have been converted to ST format, some

massaging of the data may be needed to have them work properly.

All four programs are easy to learn, not copy-protected and have good documentation.

EZ-TRACK ST

Hybrid Arts 11920 W. Olympic Blvd. Los Angeles, CA 90064 (213) 826-3777 \$65

CIRCLE 251 ON READER SERVICE CARD

Reviewed by Chris Many

During the past three or four years, programs called sequencers have been the bridge between computers and synthesizers. These programs emulate computerized player-pianos, but can control a whole orchestra of synthesized sounds. **EZ Track ST** is a simple but sophisticated home-market sequencer from Hybrid Arts, who manufacture the 8-bit MIDImate system reviewed in **Antic**, June 1985.

It should be noted immediately that EZ Track does not access the Atari's internal sound chips at all. Playing music requires an external MIDI synthesizer, such as the Casio CZ-101 (approximately \$300) or one of Yamaha's inexpensive new models. MIDI (Musical Instrument Digital Interface) is basically an electronics standard, such as serial and parallel computer interface standards. MIDI lets two or more synthesizers and computers "talk" to each other, translating musical notation into bits and bytes.

EZ Track is easy to use. Just connect your synthesizer to the MIDI In and MIDI Out ports on the back of the ST, click the start button, play a few notes and click the store button— you've recorded your first bit of music. Move to another track and add a bass line, click, click. Add a lead line on a third track, click, click. Three-part harmony in minutes. It's that easy.

To correct mistakes, just redo the tracks until you're satisfied. EZ Track's forward, record and pause controls and time counter all function identically to those on your home cassette

continued on next page

December 1986 97

recorder. In fact, the whole program operates much like a multi-track tape recorder—except that it records musical information *digitally*.

With 20 recording tracks available, the possibilities seem almost endless. You can record up to 28,000 notes on a 520ST, and an amazing 63,000 on a 1040ST. Included in this program are several advanced features usually found only on high-end professional sequencers. A technique called quantizing lets you automatically smooth the timing of awkwardly-played notes, correct to the nearest 32nd-note.

For example, if you are playing a pattern of eighth notes and you want each note to fall precisely on the beat, it's easy to correct any minor fingering errors. You can copy music from one track to another and even combine tracks with no loss of musical clarity.

Tempo adjustment also helps makes recording easier. Playing *The Flight of the Bumblebee* at full speed is no mean feat, so just slow down the

tempo to where it's comfortable for you. When you speed up the playback, you'll sound like a virtuoso.

You can also assign any track a MIDI channel—up to 16 are available. For example, if you have a synthesizer playing an electric piano sound, then everything that comes out of EZ Track

Operates like a multi-track tape recorder but it records digitally

will sound like an electric piano. But if you tune one track to MIDI channel 1, (electric piano) and tune another track (bass) to channel 2, then tune one synthesizer (electric piano) to channel 1 and your *second* synthesizer (bass) to channel 2, you'll get

two distinct sounds.

Yes, it gets expensive this way, so some companies make synthesizers that can play more than one sound at the same time. Casio's CZ-101 is probably the most affordable example.

All functions are readily accessible through the mouse or the ST keyboard. Normal disk access and file manipulation are available from within the program.

My only disappointment with EZ Track is the lack of cut-and-paste. Most simple 8-bit home music programs include this feature, which makes composition much easier. However, according to Hybrid Arts, this and many other features will be included on the upcoming MIDItrack ST and MIDItrack ST Professional.

Right now, EZ Track ST is the best sequencer available for the ST—an excellent, simple program. It brings a number of advanced features to the amateur musician and bridges the gap between high-tech music and an affordable, well-presented home program.

MIDI

Midiplay stores more than 200,000 MIDI notes/events—approximately three hours of music—in 1Mb of RAM. A real-time record/playback system, Midiplay supports all 16 channels of MIDI information including velocity, key and channel aftertouch, pitch bend, program changes and all 128 MIDI controllers such as pedals. With Midiplay you can record and play back your own music from any MIDI keyboard or synthesizer, change the musical key, tempo and timbre of the playback independently, even retrieve music files from disks to create medleys.

\$49.95. Electronic Music Publishing House Inc., 2210 Wilshire Blvd., Santa Monica, CA 90403. (213) 455-2025. FINAL.

CIRCLE 271 ON READER SERVICE CARD

SYS/EX is a universal and generic MIDI librarian that lets musicians store songs to disk. It works with about 60 different synthesizers, samplers, drum machines and other MIDI instruments. Files from different MIDI instruments can be appended from simultaneous uploading. MIDI dump files can be constructed from within the software.

TYPING SPECIAL ATARI CHARACTERS
HOW TO USE TYPO II (8-BIT)
ERROR FILE
HOW TO LISE TYPO ST

DISK SUBSCRIBERS: Programs for 8-bit Atari computers can be used immediately. Just follow instructions in the accompanying magazine articles. ST Owners: See monthly disk's ST Help File for instructions on how to transfer programs to 3-1/2 inch disk.

No part of this publication may be reproduced, stored in a retrieval system, or transmitted, in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior written permission of the publisher.

Antic program listings are typeset on the Star's SB-10 printer—from Star Micronics, Inc., 200 Park Avenue, New York, NY 10166.

TYPING SPECIAL ATARI CHARACTERS

Antic printed program listings leave a small space between each Atari Special Character for easier reading. Immediately below you will see the way Antic prints all the standard Atari letters and numbers, in upper and lower case, in normal and inverse video.

The Atari Special Characters and the keys you must type in order to get them are shown in the two boxes below.

NORMAI	L VIDEO
NORMA FOR TYPE THIS CTRL CTRL CTRL B CTRL C CTRL D CTRL E CTRL G CTRL G CTRL H CTRL I CTRL	FOR TYPE THIS THIS CTRL S CTRL T CTRL U CTRL V CTRL X CTRL X CTRL Z ESC ESC ESC CTRL - ESC CTRL - ESC CTRL - CTRL X CTRL Z CTRL

	INV	ERSE	VII	DEO

	CTRL V			INSERT	
小豆	CTRL W	1			

Whenever the CONTROL key (CTRL on the 400/800) or SHIFT key is used, *bold it down* while you press the next key. Whenever the ESC key is pressed, *release* it before you type the next key.

Turn on inverse video by pressing the Reverse Video Mode Key . Turn it off by pressing it a second time. (On the 400/800, use the Atari Logo Key instead.)

Among the most common program typing mistakes are switching certain capital letters with their lower-case counterparts—you need to look especially carefully at P, X, O and 0 (zero).

Some of Atari Special Characters are not easy to tell apart from standard alpha-numeric characters. Usually the Special Characters will be boxed. Compare the two sets of characters below:

SPECIAL			STANDARD
	CTRL F	/ /	2 /
	CTRL G	N 1	SHIFT +
	CTRL N		SHIFT -
	CTRL R	- 1	_
	CTRL S	+ (# +

HOW TO USE TYPO II (8-BIT)

TYPO II automatically proofreads Antic's type-in BASIC listings for 8-bit Atari computers. It finds the exact line where you made a program typing mistake.

Type in TYPO II and SAVE a copy to disk or cassette. Now type GOTO 32000. When you see the instruction on the screen, type in a single program line without the two-letter TYPO II code at the left of the line number. Press the [RETURN] key.

Your line will reappear at the bottom of the screen with a two-letter TYPO II code on the left. If this code is not exactly the same as the line code printed in the magazine, you mistyped something in that line.

To call back any line previously typed, type an asterisk [*] followed (without in-between spaces) by the line number, then press [RETURN]. When the complete line appears at the top of the screen, press [RETURN] again. This is also the way you use TYPO II to proofread itself.

To LIST your program, press [BREAK] and type LIST. To return to TYPO II, type GOTO 32000.

To remove TYPO II from your program, type LIST "D:FILENAME",0,31999 [RETURN] (Cassette owners LIST "C:). Type NEW, then ENTER "D:FILENAME" [RETURN] (Cassette—ENTER "C:). Your program is now in memory without TYPO II and you can SAVE or LIST it to disk or cassette.

LISTING 1

ERROR FILE

WEFAX SOURCES

Radio Shack is discontinuing the XR2211 chip specified for the WEFAX Interface Board (September, 1986). The XR2211 is a generic chip that can be found at a number of large electronics suppliers and mail-order dealers.

FILE MASTER

Disk subscribers should load *File Master* (August, 1986) from DOS and copy it to another disk. It does not RUN properly from the monthly disk menu.

If you have the *File Master* lockup problem that occurs under some combinations of DOS's and disk drives, change the 100 in line 2625 to a 90.

MICRO JULIUS

For some dates, *Micro Julius* (June, 1986) puts in the wrong day of the week. To cure this, type in the following one-line fix:

WF 830 DIF= <DOW-D>/7:DIF=2*INT <7* <DIF-INT <DIF>>+0.5>+1

HOW TO USE TYPO ST

TYPO ST is the automatic proofreading program for checking **Antic's** ST BASIC type-in listings. It finds any program line where you made a typing mistake.

Type in TYPO ST and SAVE a copy to disk before you RUN it. Now type RUN in the command window and press the [RETURN] key, or click on RUN from the RUN menu.

TYPO ST first asks for the name of the file to check. Type the desired filename and press [RETURN]. (TYPO ST will proofread itself if you type TYPOST.BAS as the filename.) Next, TYPO ST asks where you want the TYPO table printed. Type [S] [RETURN] for Screen, or [P] [RETURN] for Printer.

TYPO ST now reads your ST BASIC program and prints out a table of four-number codes—and the line number for each code. Compare your printed TYPO ST table with the **Antic** TYPO ST table published at the end of the program you are checking. If any of your four-number codes don't match the magazine's codes, you have made a typing mistake somewhere in that line. Carefully recheck your line against the published version.

Antic uses a word processor to format ST BASIC listings for publication, so we can indent lines and make the program structure more understandable. ST BASIC doesn't allow indentation and will strip off any spaces between the line number and the first BASIC instruction. Therefore, TYPO ST ignores space characters and does not care how far instructions are spaced apart.

TYPO ST cannot determine if two different characters have been switched within a line. For example, PRINT and PRNIT will look the same to TYPO ST. However, ST BASIC itself catches this error and points it out to you.

CARDIAC ARREST!

for 800/XL/XE or ST

\$69

with 48-page manual

The ultimate adventure -- because it's real. "Cardiac Arrest!" is an incredible cardiac resuscitation simulator so stimulating, it's like a medical adventure game for doctors, nurses, or paramedics. Or for someone who wants to play doctor.

You interpret the on-screen EKG and vital signs, type your order (in regular English), and see what happens. You won't believe this simulator runs on a home computer. Over three years in development by an emergency physician.

Other ACLS Software:

INTRODUCTORY OFFER

For your Atari 800/800XL/65XE/130XE

We're dedicated to bringing you truly practical software at DOWN TO PLANET EARTH PRICES. Our newest 8-bit products are the creation of JEFF BRENNER, columnist for Computer Shopper, of "Applying the Atari" fame, and author of magazine and book articles in ANALOG, COM-PUTE! and others. All of our programs are superbly engineered for ease-of-use and come handsomely packaged with complete documen-

Write for our FREE CATALOG - or better yet, take advantage of the following HOLIDAY SPEC-IALS, ready for IMMEDIATE SHIPMENT.

• RESPONSE ANALYSIS PROGRAM (RAP) will astound and amuse you with its remarkable ARTIFICIAL INTELLIGENCE. Terrific party game. Excerpt from actual conversation:

ME: Do you mind if I print what you are saying? RAP: Do you think I know what I am saying? ME: That's true — you're a computer program RAP: Have you ever wanted to be a computer program?

RAP features FAST RESPONSE TIME and is USER EXPANDABLE so you can CREATE YOUR OWN PERSONALITIES! Only \$12.95.

- EASY STUDY PROGRAM (ESP) gives you that unfair advantage for almost any type of exam. PROVEN MEMORY-TRAINING TECHNIQUE maximizes studying efficiency so you'll retain more in less time. Supports disk functions, editing, score graphing, and 130XE RAMDISK. Only \$14.95.
- INSTANT ALPHABETIZER gets those names, book titles, record albums, video cassettes in order with SUPER MACHINE-LANGUAGE SPEED. Save lists to disk, edit, add, and print! Also supports automatic multi-disk directory alphabetization and ramdisk. Only \$12.95.
- BUDGETMATE keeps track of your finances down to EVERY LAST TRANSACTION DETAIL! 20 user defined catagories each holding 20 details for EACH MONTH! Not only helps you keep a balanced budget, but end-of-year income/ex-pense summary is INDISPENSABLE WHEN TAX TIME ARRIVES. Supports Atari CX-85 keypad, too! Only \$14.95.
- MAILING LIST stores names, addresses, allows user categorizing, searches, and can PRINT BY CATEGORY! Double-column label printing, ID code, and full disk functions supported. Only \$12.95.
- FORMS GENERATOR shows you the exact form you're designing on its SCROLLING-SPREADSHEET SCREEN! Use graphics (with dot-matrix printers) to create professional looking invoices, purchase orders, statements, etc. No tedious "cells" or restricted positioning. LARGE CALCULATION-DEF-INITION CAPABILITY. Supports keypad and ramdisk. Only \$12.95.

Tech Tips

BY BILL MARQUARDT, ANTIC TECHNICAL ASSISTANT

his month's Tech Tips will explain some handy ways to modify Atari DOS 2.0 for special purposes. DOS 2 is older than DOS 2.5 and the not-recommended DOS 3, but it is still the most commonly used official Atari Disk Operating System. And it serves as the standard for DOS compatibility. DOS 2 is the operating system you will find on each month's Antic Disk.

First, a few words of CAUTION: The following enhancements were designed specifically for Atari DOS 2. We don't know exactly what would happen if you try these changes any other DOS, but we doubt if the results would be anything good. And be sure to keep a backup copy of original DOS 2, in case you later change your mind about using any of these modifications.

DUPLICATE FILENAMES

One problem with DOS 2 is that it is possible to rename a file to an existing filename. If you attempt to delete or rename one of them, they will both be deleted or renamed. Here is a solution to this problem.

Take a disk with the DOS.SYS and DUP.SYS files on it. Put it in your drive and turn on your computer. At the READY prompt, type POKE 3117,234 and POKE 3118,234. Then type DOS. This patch will let you rename the first file without affecting the second when using option E from the DOS menu. We found this tip from Jerry White in the August, 1986 newsletter of the Lawrence Atari Computer Club.

The next tips appeared in various users group newsletters and were credited to the sysop of the Atlantis BBS.

ERROR 164

You will see Error 164 (File Number Mismatch) if your file is scrambled. Normally, your computer won't allow you to see the file and you are hopelessly lost if this was your only copy. However, if you do a POKE 4148,234: POKE 4149,234 you will be able to LOAD your file, garbage and all, and correct it! Be sure to SAVE the corrected file to another disk and avoid using the damaged version.

OVER TWO DRIVES

You must tell DOS that you have more than two drives attached to your system if you want to access them. Location 1802 is the flag for this purpose. Each bit in the byte stored there represents a drive. Setting a bit will allow DOS to access the corresponding drive.

Normally, the lowest two bits are set, so you would find a 3 in location 1802. By POKEing in a 7 you set DOS for three drives, and by POKEing in 15, you set DOS for four drives. This is because the bit patterns are 0111 and 1111 respectively. This is a change that should be made permanent by re-writing DOS to disk after the POKE. You can access as many as eight drives. But keep in mind that

every drive you add requires 128 bytes of memory to store its buffer.

OPEN FILE LIMITS

DOS limits you to three simultaneously open files. But if you find this restrictive, you can expand the limit to seven by simply doing a POKE 1801,7. A buffer of 128 bytes is used for each file. Use a number less than seven if you don't want to give up all that valuable RAM.

LOWERCASE FILENAMES

If you are bored with all uppercase filenames try this: POKE 3818,48:POKE 3822,123. Now you can use any ATASCII character from CHR(48) to CHR(122) ("0" to "z"). Note that the second POKE value is the ATASCII value plus one. It is *not* recommended to go above or below these values.

CHANGING WILDCARDS

This tip is of dubious value, but if you would like your wildcard character to be something other than the asterisk [*], POKE 3783 with the ATASCII value of your chosen character.

PERMANENT POKES

Remember that all the above POKEs are made from BASIC in the immediate mode. You do *not* need line numbers. The changes can then be made permanent by typing DOS to go to the DOS menu and using option H to rewrite your modified version of DOS to disk.

DIRECTORY TEXT

Would you like to create a text file on your disk that contains the directory? This short routine by Sally Nagy appeared in the newsletter of the Capitol Hill Atari Owners Society (CHAOS):

10 DIM A\$(20),B\$(1280)

20 OPEN #1,6,0,"D: * . * ":TRAP 80

40 INPUT #1;A\$:B\$(LEN(B\$)+1)=A\$

60 GOTO 40

80 CLOSE #1:OPEN #1,8,0,"D:DISKDIR"

90 B\$(LEN(B\$)+1)="":B\$(LEN(B\$)+1)=A\$

110 M=17:FOR N=1 TO LEN(B\$)/M

130 PRINT #1,B\$((N-1)*M+1,N*M)

140 NEXT N:CLOSE #1

If you have a Tech Tip that you would like to share with other readers, send it along to Antic Tech Tips, 524 Second Street, San Francisco, CA 94107. You might get your name in print. We always welcome very short programs that demonstrate the Atari's powers, simple hardware modifications, or useful macros for popular software.

Tokyo for \$19.95

東京

In the continuing evolution of scenery, SubLOGIC introduces the Japan and San Francisco Bay Area Scenery Disks for Flight Simulator II.

- Tokyo to Osaka is a comfortable 240-mile flight. The natural beauty of the Japanese coastline and mountain ranges complement the standard cross-country details.
- The beautiful San Francisco Bay Area "Star" Scenery Disk is perfect for concentrated sight-seeing.
- For the cross-country adventurer, our standard Western U.S. scenery (Disks 1-6) contains major airports, nav-aids, cities, highways, rivers, lakes, and mountains.

SubLOGIC Scenery Disks are available individually for \$19.95. The six-disk Western U.S. set is available for \$99.95. See your dealer, or write or call SubLOGIC for more information.

From Origin, source of the classic, award-winning UltimaTM series, comes

A futuristic, fast-paced strategy roleplaying game by Lord British and Chuckles. Based on the

/ award-winning Car Wars® board game by Steve Jackson.

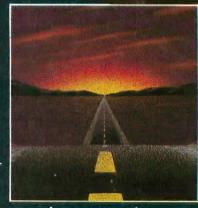

Available on Apple*

Drive the freeways of the future where the right of way goes to the biggest gun. Somewhere within the 16 cities and outlaw-infested highways are the clues you will need to complete the ultimate mission.

Step into the arena on Amateur Night and earn the right to custom-build your combat vehicles.

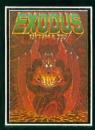

The AADA will offer you courier missions. The FBI and the underworld will vie for favors. But watch out! To survive you'll need road experience, the ability to decipher clues, gambling skills, money, a super car—even a clone.

The final gauntlet will test your tactical skills and hair trigger reactions to the limit. But with triumph comes honor, and entry into the elite circle of AutoDuellists. The challenge of AutoDuel® awaits you. Are you ready?
